engineering is a discipline that integrates several fields of electrical engineering and computer science required to develop computer systems. Computer engineers usually have training in electronic engineering software design and hardware software integration instead of only software engineering or electronic engineering. Computer engineers are involved in many hardware and software aspects of computing from the design of individual microprocessors, personal computers and supercomputers to circuit design. This field of engineering not only focuses on how computer systems themselves work but also how they integrate into the larger picture. ICCE 2011 Volume 2 is to provide a forum for researchers, educators, engineers and government officials involved in the general areas of Information system and Software Engineering to disseminate their latest research results and exchange views on the future research directions of these fields. 81 high quality papers are included in the volume. Each paper has been peer reviewed by at least 2 program committee members and selected by the volume editor. Special thanks to editors staff of association and every participants of the conference. Urban Storm Drainage, 1994 *Enhancing Urban Environment by Environmental Upgrading and Restoration* Daniel Sztruhar, Mario Giulianelli, Ben Urbonas, 2006-07-06. As urban areas keep growing, water infrastructure ages and the requirements on environmental protection become more rigorous, there is a continual need for upgrading water pollution control facilities and restoring degraded urban waters. Such issues are addressed in this book by focusing on five major topics: a) Upgrading stormwater management facilities, b) Retrofitting/upgrading combined sewer overflow (CSO) facilities, c) Optimising upgrading sewage treatment plant performance, d) Urban stream restoration and e) Challenges in restoring urban environment. Each chapter contains some overview papers followed by research or case study papers. Besides presentations of new approaches and accomplishments in the field of upgrading and restoration, several papers provide analysis of vast needs in this field in several countries of Central and Eastern Europe which either recently joined the European Union (EU) or are preparing for accession and need to comply with the existing EU directives dealing with environmental protection. As such, this book will be of primary interest to researchers and university lecturers dealing with environmental upgrading and restoration, environmental planners from all levels of government, municipal engineers and politicians and finally the private industry representatives, consultants, private utilities and environmental technology suppliers searching for new business opportunities among the new or aspiring members of EU.
