Small Urban Interiors 500 Solutions For Living:

Small Urban Interiors Ana Cristina G. Cañizares, 2002 The lifestyle lead by many of today's urbanites points to the conviction that less is more. With living space at a premium the sole option for many is to make the most of what they have. Fortunately this has been proven to be the motivation of some of the most innovative solutions that transform small spaces into practical and stylish contemporary pads. Color can enhance the feeling of space. High ceilings can transform into additional levels. Sliding doors and portable closets replace permanent walls and furniture on wheels offers versatility and comfort. These are only several examples of the design solutions available to apartments, studios, lofts and small houses that are all limited by one thing: the lack of surface area. Featuring inspirational projects by some of the world's best known architects and interior designers, *Small Urban Interiors* provides a fresh look at how to make the most of small living spaces in urban environments. *Small Urban Interiors* Ana Cristina G. Design Elizabeth Burton, Lynne Mitchell, 2006 This is the first book to address the design needs of older people and the disabled in the general outdoor built environment. It provides information on design principles essential to built environment professionals, urban designers, planners and landscape architects who want to provide for all users of urban space and who wish to achieve true sustainability in their designs. **BOOK JACKET** **Rethinking Infrastructure Design for Multi-Use Water Services** Čedo Maksimović, Mathew Kurian, Reza Ardakanian, 2014-08-27 As we approach a historic tipping point in the global trend toward urbanisation, within two decades urban dwellers will increase from 49% to 60% of the planet's population. This book identifies and addresses a critical problem: water. The editors show how cities can shift from being water consumers to resource managers, applying urban water management principles to ensure access to water and sanitation infrastructure and services, manage rainwater, wastewater, storm water, drainage and runoff, pollution control, waterborne diseases and epidemics and reduce the risk of such water-related hazards as floods, droughts and landslides. The book explores the Multiple Use Water Services (MUS) paradigm, offering a section on the MUS approach and a means of calculating the value of MUS systems, as well as tools and resources to support decision making. Case studies illustrate MUS in selected urban and rural contexts. Each case study breaks out the challenges, policy framework, benefits, benchmarks, lessons learned, success and failures and potential next steps. The contributors consider the main options for applying the Multiple Use Water Services (MUS) paradigm, breaking down its components and offering cost-benefit analyses along with challenges and considerations for both the short and long term. Also discussed are methods by which mutual interactions of water infrastructure and vegetated areas are taken into account in the synergy of spatial planning and optimised modelling of ecosystems, performance indicators. This method of planning should make future developments cheaper to build; their users will pay lower utility bills for water, energy and heating. These developments will be more pleasant to live in and property value would likely be higher. The brief includes a section on the MUS approach and a means to calculate the value of MUS.

systems as well as provides tools and resources to support decision making Case studies are included to illustrate MUS in selected urban and rural contexts Each case study breaks out the challenges policy framework benefits benchmarks lessons learned success and failures and potential next steps **Urban Design and Human Flourishing** Tim G.

Innovations in Design & Decision Support Systems in Architecture and Urban Planning Jos P. Leeuwen, van, Harry J.P. Timmermans, 2006-09-21 Traditionally the DDSS conferences aim to be a platform for both starting and experienced researchers who focus on the development and application of computer support in urban planning and architectural design This volume contains 31 peer reviewed papers from this year's conference This book will bring researchers together and is a valuable resource for their continuous joint effort to improve the design and planning of our environment **Participatory Design and Self-building in Shared Urban Open Spaces** Carolin Mees, 2018-04-12 The book investigates the development of community gardens with self built structures which have existed as a shared public

open space land use form in New York City's low income neighborhoods like the South Bronx since the 1970s. These gardens have continued to be part of the urban landscape until today despite conflicting land use interests, changing residents' groups and contradictory city planning. Both community gardens and self-built structures are created in a participatory design and self-built effort by urban residents and are an expression of the individual gardeners' preferences, their cultural background and the decisions made by the managing residents' group in regards to the needs of their neighborhood. Ultimately, community gardens with self-built structures are an expression of the people's will to commonly use this land for open and enclosed structures next to their homes in the city and need to be included in future urban planning.
