Drennan, 2013-06-29 This book is intended as an introduction to basic statistical principles and techniques for the archaeologist It grows primarily from my experience in teaching courses in quantitative analysis for undergraduate and graduate students in archaeology over a number of years The book is set specifically in the context of archaeology not because the issues dealt with are uniquely archaeological in nature but because many people find it much easier to understand quantitative analysis in a familiar context one in which they can readily understand the nature of the data and the utility of the techniques The principles and techniques however are all of much broader applicability Physical anthropologists cultural anthropologists sociologists psychologists political scientists and specialists in other fields make use of these same principles and techniques The particular mix of topics the relative emphasis given them and the exact approach taken here however do reflect my own view of what is most useful in the analysis of specifically archaeological data It is impossible to fail to notice that many aspects of archaeological information are numerical and that archaeological analysis has an unavoidably quantitative component Standard statistical approaches are commonly applied in straightforward as well as unusual and ingenious ways to archaeological problems and new approaches have been invented to cope with the special quirks of archaeological analysis The literature on quantitative analysis in archaeology has grown to prodigious size in the past 25 or 30 years **Possessing the City** Anish Vanaik, 2020 Possessing the City is a social history of the property market in late colonial Delhi a period of much turbulence and transformation It argues that historians of South Asian cities must connect transformations in urban space with the economy of the city Using new archival material Anish Vanaik outlines the place of private property development in Delhi's economy from 1911 to 1947 Rather than large scale state initiatives like the Delhi Improvement Trust it was profit oriented decentralised and market based initiatives of urban construction that created the Delhi cityscape This volume also serves to chart the emerging relationship between the state and urban space in this period Rather than a narrow focus on urban planning ideas it argues that the relationship be thought of in a triangular fashion the intermediation of the property market was crucial to emerging statecraft and urban form in this period Possessing the City examines struggles and conflicts over the commodification of land particularly disputes over rents and prices of urban property The question of commodification can also however be discerned in struggles that were not ostensibly about economic issues clashes over religious sites in the city Through careful attention to the historical interrelationships between state space and the economy in Delhi this volume offers a novel intervention in the history of late colonial Delhi **Independent Offices Appropriations for 1965** United States.
