Christian Blaise, Jean-François Férard, 2006-01-16 Developed developing and emerging economies worldwide are collectively contributing multiple stresses on aquatic ecosystems by the release of numerous contaminants This in turn demands that basic toxicological information on their potential to harm living species be available Hence environmental protection programs aimed at preserving water quality must have access to comprehensive toxicity screening tools and strategies that can be applied reliably and universally While a good number of toxicity testing procedures and hazard assessment approaches have been published in the scientific literature over the past decades many are wanting in that insufficient detail is available for users to be able to fully understand the test method or scheme and to be able to reproduce it successfully Even standardized techniques published in recognized international standard organization documents are often lacking in thoroughness and minutiae Paucity of information relating to biological test methods may be consequent and trigger several phenomena including generation of invalid data and resulting toxicity measurements erroneous interpretation and decision taking with regards to a particular chemical or environmental issue or simply abandonment of testing procedures Clearly improperly documented toxicity testing methods can be detrimental to their promotion and use as they open the doorway to unnecessary debate and criticism as to their raison d'être Furthermore this situation can indirectly contribute to delaying minimizing or eliminating their application thereby curtailing the important role toxicity testing plays in the overall protection and conservation of aquatic ecosystems

Sediment Risk Management and Communication Susanne Heise, 2007-03-12 In dynamic river systems effective and sustainable risk management of sediments contaminants and their sources must be carried out on a

river basin scale A diversity of interests and risk perceptions whether environmental economical or personal as well as the broad variety of uses and functions of river systems can lead to conflicts and disagreements about how and where river systems should be managed This requires a transparent methodology to assess environmental risks in the river basin followed by a prioritisation of those sites where measures would yield the highest positive effect for the river basin and where financial resources could be allocated most efficiently However risk perceptions may only partially be influenced by scientific assessments of risk and often also depend on a variety of factors such as personal experience and confidence in institutions Risk managers must develop methods to balance technical and socioeconomic issues with the aim to reduce risks posed by sediments to environmental and economic resources to a level that is perceived as tolerable by society Sediment Risk Management and Communication Vol 3 in the SEDNET mini series is based on discussions that were held in the working group on Risk Management and Communication which was one of 4 working groups within the European Demand Driven Sediment Research Network SedNet It aims to analyse the current situation in Europe with regard to sediment risk management issues to draw conclusions from this analysis and to offer recommendations for sustainable risk management from basin to site specific scale This volume also available as part of a 4 volume set ISBN 0444519599 Discount price for set purchase A broad overview on sediment quality and impact assessment of pollutants Suitable for both newcomers to the field of sediment treatment and specialists alike Outlines practical examples of methods used in sediment quality analysis
