Smarandache Loops:

Smarandache Loops W. B. Vasantha Kandasamy, 2002 Generally in any human field a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B which is embedded with a stronger structure S . By proper subset one understands a set included in A different from the empty set from the unit element if any and from A . These types of structures occur in our every day's life that's why we study them in this book. As an example a non empty set L is said to form a loop if on L is defined a binary operation called product denoted by \cdot such that For all $a, b \in L$ we have $a \cdot b \in L$ closure property There exists an element $e \in L$ such that $a \cdot e = a$ for all $a \in L$ e is the identity element of L For every ordered pair $a, b \in L$ there exists a unique pair $x, y \in L$ such that $ax = b$ and $ya = b$. Whence a Smarandache Loop or S loop is a loop L such that a proper subset M of L is a subgroup with respect to the same induced operation **Mathematical**
