Sodium Channels And Neuronal Hyperexcitability:

Sodium Channels and Neuronal Hyperexcitability Gregory R. Bock, Jamie A. Goode, 2001-12-21 Recent progress has led to a better understanding of the molecular structure of sodium channels how they work and the mechanisms that restrict their expression to particular cell types This book explains how these channels are modulated in various pathological states to enable the development of therapeutic strategies based on sodium channel restoration. The authors present the most current research on sodium channels and neuronal function Brings together both the basic biology and biophysics with detailed consideration of the medical applications in chronic pain and epilepsy Includes coverage of channelopathies sodium channel gene expression the modulation of sodium channels and molecular mechanisms of gating and drug block of sodium channels

The Oxford Handbook of Neuronal Ion Channels Arin Bhattacharjee, 2023 Neurons are excitable cells They use ions and electrical signaling to talk to each to other and when they talk to each other neurons control behavior The Oxford Handbook of Neuronal Ion Channels is an accessible reference describing the nature and properties of ion channels in neurons The book explains how ion channels open and close how they can be selective for specific ions and how they give rise to action potentials Included are in depth chapters discussing specific classes of ion channels potassium channels sodium channels neurotransmitter gated ion channels and other specialized channels Throughout the handbook important insight is provided on the contribution ion channels make to neuronal excitability and to synaptic transmission The handbook goes further to discuss channel opathies a group of human diseases such as epilepsy pain and migraines that can be caused by ion channel dysfunction For neuroscientists biophysicists and neuropharmacologists this handbook is a valuable reference of ion channel biology and function Plasticity and Reconstruction of Neural Network in Brain Injury Zhang Pengyue, Yuchuan Ding, Yulong Bai, Xiangjian Zhang, Yunping Deng, 2021-08-24 Mechanisms and Mediators of Neuropathic Pain Annika B. Malmberg, Sandra R. Chaplan, 2012-12-06 Numerous improvements in our understanding of the mechanisms that underlie neuropathic pain states have come from the development of animal models most of which involve partial peripheral nerve injury. The animal models have shown that nerve injury initiates a cascade of events resulting in altered neurochemistry and molecular biology of the peripheral neurons the dorsal root ganglion cell and changes in neurotransmitter and receptor expression in the dorsal horn of the spinal cord Moreover nerve injury produces anatomical changes with functional consequences This volume summarises the current understanding of the pathophysiological

processes in the peripheral and central nervous system that contribute to the neuropathic pain It provides a timely review of neuropathic pain mechanisms written by experts in the field Na Channels from Phyla to Function ,2016-08-29 Na Channels from Phyla to Function the latest volume in the Current Topics in Membranes series is targeted toward scientists and researchers in biochemistry and molecular and cellular biology providing the necessary membrane research to assist them in discovering the current state of a particular field and in learning where that field is heading This volume offers an up to date presentation of the current knowledge in the field of Na Channels Written by leading experts in the field of Na Channels Contains original material both textual and illustrative that make it a very relevant reference Presented in a very comprehensive manner Both researchers in the field and general readers will find this book relevant and up to date with regard to its information Cousins and Bridenbaugh's Neural Blockade in Clinical Anesthesia and Pain Medicine Michael J. Neuroplasticity and Extracellular Proteolysis Jerzy W. Mozrzymas, Leszek Kaczmarek, 2016-05-18 Neuroplasticity refers to the ability of the Central Nervous System CNS to alter its structure and function in response to a variety of physiological and pathological processes such as development cognition injury or neurological diseases Since more than four decades studies on synaptic plasticity in the context of memory and learning attracted a remarkable interest Soon after first seminal works on synaptic plasticity were published research in this field was extended by studies on non synaptic as wells as structural plasticity towards a goal to understand cellular and molecular determinants of cognition Over the past two decades yet two additional crucial players in neuroplastic phenomena started to be intensely investigated glial cells and the extracellular matrix ECM Growing awareness that glial cells especially astrocytes are important regulators of synaptic functions gave rise to a novel concept of a tri partite synapse Also over the last two decades a growing body of evidence has

accumulated that the extracellular matrix ECM in the brain is strongly involved in regulation of neurons in particular in synaptic plasticity Thus a concept of tetra partite synapse was put forward by some neuroscientists The cross talk between neuron glia ECM system involves enzymatic degradation of proteins or peptides and amino acids occurring in each of these brain constituents by means of a variety of proteases Importantly it has been realized that proteases such as serine proteases and matrix metalloproteinases not only accompany robust phenomena such as cell division or development or neurodegnerative conditions but may play a very subtle signaling functions particularly important in memory acquisition Indeed the repertoire of substrates for these enzymes covers a wide variety of proteins known to play important role in the neuroplastic phenomena e g BDNF TNF a ephrin systems various cell adhesion molecules etc In result the role of metalloproteinases and such serine proteases as tissue plasminogen activator tPA neuropsin or neurotrypsin in synaptic plasticity as well as in learning and memory has been particularly well demonstrated It needs to be emphasized however that in spite of a remarkable progress in this field several basic questions regarding molecular and cellular mechanisms remain unanswered Potential involvement of so many important players various proteases and their substrates in neurons glia and in ECM points to an enormous potential for plasticity phenomena but makes also studies into underlying mechanisms particularly difficult In the proposed Research Topic we provide both review of the current state of the art and present some original reports on specific aspects of the role of proteolysis in neuroplasticity phenomena The present ebook starts with extensive reviews describing involvement of proteolysis not only in synaptic plasticity but also in regulating endogenous excitability and structural changes at the network cellular and subcellular levels Cross talk between neuroplasticity and proteolysis is also emphasized in the context of development and in relation to various pathologies Whereas in the first part of the present ebook the major focus is on metalloproteinases the successive articles address the role of neuropsin and thrombin The Research Topic is concluded with a series of articles describing the components of extracellular matrix and adhesion proteins and their elaboration by mechanisms dependent directly or indirectly on proteolysis We do hope that the present ebook will further stimulate the interest in the fascinating investigations into neuroplasticity proteolysis cross talk

and Disease Maren Engelhardt, Vann Bennett, 2019-11-04 Ever since Santiago Ram n y Cajal sketched his captivating panels of the microscopic structure of the brain with its vast diversity of neuronal morphology over a century ago scientists have been drawn to this seemingly chaotic network of neurites and processes to uncover how structure relates to function During the course of a century we have moved from merely describing neuronal and glial morphology to furthering our understanding of such intricate processes as organelle and factor transport cellular compartmentalization neuronal polarity cytoskeleton dynamics neurite pathfinding and the impact of pathophysiological insult on these structures and events Yet to this day and likely for the foreseeable future much work remains to be done to fully grasp the exceptional role of neurites for the function of larger neuronal ensembles and networks While the somatodendritic domain of neurons has been in the focus of attention for many years mostly because of its great dynamic remodeling capacity during events of plasticity e g learning the axonal domain has somehow remained in the background despite the fact that especially recent comprehensive studies from various fields of research underline the axon s contribution to dynamic plasticity processes Consequently this Research Topic focuses on the many exciting aspects of axonal neurobiology ranging from membrane composition and molecular determination during development to axonal domain specialization and physiology in health and disease In Chapter 1 Axons in the PNS Bombeiro et al use immunodeficient mice to study the role of lymphocytes during the regeneration of peripheral nerves showing that the modulation of immune responses after injury can be an efficient approach to enhance nerve regeneration in the PNS Using a DRG model Berbusse et al identify the onset of damage to mitochondrial structure and dynamics as a key event during early axon degeneration and provide evidence that Nmnat1 a member of the family of nicotinamide nucleotide adenylyltransferases can have protective effects by preserving normal mitochondrial integrity and dynamics In another study of PNS nerve regeneration Law et al use proteomics approaches via Mass Spectrometry to provide evidence that rosovitine a synthetic purine nucleoside analog can successfully promote PNS axon regeneration In Chapter 2 Axonal development in the central nervous system Yoshimura et al analyze specialized axonal domains namely the axon initial segment and nodes of Ranvier with regards to their expression profiles of the major scaffolding protein IV spectrin Super resolution microscopy reveals a potential developmental switch of spectrin isoforms at both axonal domains In a related study also using super resolution microscopy Leterrier et al examine a potential reciprocal role of membrane partners in ankyrin G targeting and stabilization at the axonal membrane during development The authors demonstrate a tight and precocious association of ankyrin G with its membrane partners H fflin et al address the question of axon initial segment morphology across different cell classes in cortical organotypic slice cultures and find a surprising heterogeneity especially between pyramidal cells and interneurons in primary visual cortex In a major step towards establishing a successful live label of the axon initial segment Dumitrescu et al report the development of a genetically encoded construct consisting of a voltage gated sodium channel intracellular domain fused to yellow fluorescent protein YFP NaVII III Nelson and Jenkins then provide a comprehensive Review article on the axon initial segment and nodes of Ranvier with a special focus on the various scaffolding protein isoforms and their role in human disease In Chapter 3 Axonal physiology and plasticity Nikitin et al investigate fast onset dynamics of action potentials during neuronal development in vitro showing that encoding of high frequencies improves upon culture maturation accompanied by the development of passive electrophysiological properties and action potential generation Using pharmacological and RNA interference approaches Tapia et al provide evidence that cannabinoid receptors and their ligands can modulate dendritic morphology and thus indirectly also affect ankyrin G accumulation at the axon initial segment A Mini Review by Zbili et al discusses the potential impact of subthreshold changes in presynaptic membrane potential before action potential initiation on neurotransmitter release and which significant impact such mechanisms could have on information processing in neuronal circuits Yamada and Kuba close this chapter with a Mini Review on axon initial segment plasticity with a particular focus on ion channels and the biophysics of excitability In Chapter 4 Axon degeneration and regeneration Hamada et al investigate the often overlooked question to which extent myelin loss affects action potential propagation along distal branch points and

axon collaterals Using the cuprizone demyelination model and optical voltage sensitive dye imaging the authors uncover functional consequences of demyelination that reach well beyond the main axon In a model of mild traumatic brain injury Vascak et al demonstrate complex aspects of this injury type on neocortical circuit function including changes in inhibitory perisomatic input and axon initial segment driven output in affected layer V neurons In a Mini Review Grosch et al discuss recent advances in the field of Parkinson's disease with a focus on early degeneration in dopaminergic and serotonergic neurons of the basal ganglia The last two articles cover the topic of axonal regeneration Li et al investigate the role of activated astrocytes in spinal cord lesion and how their functional downregulation via an inhibitor of mitochondrial fission Mdivi 1 could potentially have positive impact on lesion scar formation and axonal regeneration In a final Review Liu et al highlight recent advances in the development of biomaterial scaffolds and cell transplantation strategies to combine two promising therapeutic approaches for spinal cord injury General and Molecular Pharmacology Francesco Clementi, Guido Fumagalli, 2015-07-02 With a focus on functional relationships between drugs and their targets this book covers basic and general pharmacology from a cellular and molecular perspective with particular attention to the mechanisms of drug action the fundamental basis for proper clinical use without neglecting clinical application toxicology and pharmacokinetics Covers cell and molecular pharmacology bringing together current research on regulation of drug targets at a level appropriate for advanced undergrad and graduate students Discusses the relevance of pharmacokinetics and drug development for the clinical application of drugs Presents material from the perspective of drug targets and interaction the theoretical basis of drug action analysis and drug properties Focuses on structure function relationships of drug targets informing about their biochemical and physiologic functions and experimental and clinical pathways for drug discovery and development Has a companion website that offers a host of resources short additional chapters about methodology topics at the forefront of research and all figures and tables from the book Pain Medicine Board Review E-Book Anna Woodbury, Boris Spektor, Vinita Singh, Brian Bobzien, Trusharth Patel, Jerry Kalangara, 2021-08-05 Offering nearly 900 board style questions answers and explanations written by Dr Anna Woodbury and colleagues at Emory Medical School Pain Medicine Board Review 2nd Edition fully prepares you for success on the American Board of Anesthesiology s Pain Medicine certification and recertification exam This well written and expertly reviewed resource covers all of the major topics on the exam tests your current knowledge and helps you identify areas requiring further study Contains approximately 900 board style questions with answers and concise explanations all thoroughly reviewed to ensure complete accurate information throughout Directs you to the appropriate chapter in Honorio Benzon's highly regarded Practical Management of Pain 5th Edition for further reading and detailed explanations Includes new questions and answers in specific areas of recent growth pharmacologic psychological and physical medicine treatments nerve block and interventional techniques Ideal for any physician desiring Pain Medicine certification including pain medicine specialists anesthesiologists physical medicine and rehabilitation
