

AN INTRODUCTORY GUIDE TO PUTTING RESEARCH INTO PRACTICE

4. Finding new evidence – research design

Alan Borthwick, Lisa Farnon and Jackie Campbell

Conventionally, designs for research studies are divided into two categories: quantitative and qualitative. As will be seen later, the research design used should follow from the research question and ensure that data are collected and analysed in a way that will answer that question. However, the form that the research question takes is largely a function of underlying philosophy and of why the question is being asked in the first place.

This article examines the main types of philosophical research stances as these underpin the resulting research methodologies. The main characteristics of quantitative and qualitative designs are outlined and, finally, some of the main research designs are described.

RESEARCH PHILOSOPHIES

The main models of enquiry used are the positivist and the interpretative models.

The positivist model:

- The natural science model
- Based on testing theories and hypotheses
- Insists on objectivity and neutrality - avoidance of personal bias
- Researcher controls the theoretical framework, sampling frames and the structure of the research
- Theory/concepts developed before data collection - seeks to falsify the initial hypothesis
- Favours quantitative methods

The interpretative model

- Has its roots in philosophy, history, anthropology etc
- Approach centres on interpretation and creation of meaning by human beings
- Accepts subjective reality
- Looks at understanding rather than explanation
- Context is crucial
- Researchers are reflexive, not objective
- Favours qualitative methods

QUANTITATIVE VS QUALITATIVE DESIGNS

The investigation of new knowledge can be approached in many ways. The approach taken depends on the nature and type of the research problem and the philosophical stance of the researcher (amongst other things). The most important thing, however, is that the methods should be chosen to answer the research question.

There is also a link between research design and analytical methods. Future articles in this series will focus on

C. M. Ran, Frank van der Linden, 2000 Software development organizations are now discovering the efficiencies that can be achieved by architecting entire software product families together In *Software Architecture for Product Families* experts from one of the world's most advanced software domain engineering projects share in depth insights about the techniques that work and those that don't The book offers a solutions oriented case study approach covering the entire development lifecycle based on advanced work done by three of Europe's leading technology companies and their academic partners Discover the challenges that drive companies to consider architecting product families and the new problems they encounter in doing so Master concepts and terms that can be used to describe the architecture of a product family then learn how to assess that architecture and transform it into working applications The authors also present chapter length real world case studies of domain engineering projects at Nokia Philips and ABB Software Product Lines Gary J. Chastek, 2003-08-02 Software product lines are emerging as an important new paradigm for software development Product lines are enabling organizations to achieve impressive time to market gains and cost reductions In 1997 we at the Software Engineering Institute SEI launched a Product Line Practice Initiative Our vision was that product line development would be a low risk high return proposition for the entire software engineering community It was our hope from the beginning that there would eventually be sufficient interest to hold a conference The First Software Product Line Conference SPLC1 was the realization of that hope Since SPLC1 we have seen a growing interest in software product lines Companies are launching their own software product line initiatives product line technical and business practices are maturing product line tool vendors are emerging and books on product lines are being published Motivated by the enthusiastic response to SPLC1 and the increasing number of software product lines and product line researchers and practitioners the SEI is proud to sponsor this second conference dedicated to software product lines We were gratified by the submissions to SPLC2 from all parts of the globe from government and commercial organizations From these submissions we were able to assemble a rich and varied conference program with unique opportunities for software product line novices experts and those in between This collection represents the papers selected from that response and includes research and experience reports **Working IEEE/IFIP Conference on Software Architecture** Rick Kazman, 2001 The proceedings from the August 2001 conference in Amsterdam contain the

line engineering The projects originated from the need of the industry to improve software engineering performance by organizing product development in product lines The results obtained within the projects have been implemented in several large industries e g automotive e business medical systems and mobile phones They involve a radical shift in software construction and production The most important research results of the projects are collected in this book Product line engineering was already applied within industry in the 1980s and presumably earlier In the 1980s good architects in many telecommunications c panies based their architectures on the ideas of David Parnas who published on the subject of program families They were facilitated by the CHILL language widely used by the telecommunications companies This language deploys the same modularity principles as the Modula programming language family Modularity is a crucial ingredient for implementing systems with a component based architecture Being able to compose the products of components is an important mechanism in all product line architectures In the 1990s the product line ideas started to gain ground in other industries Around 1995 the company experiences reached the academia and since then people in companies and academia have collaborated widely on this subject The ESAPS CAF and FAMILIES projects manifest an institutionalized form of this collaboration American Book Publishing Record ,2000-07 *Design and Use of Software Architectures* Jan Bosch,2000 A practical guide to designing and implementing software architectures **Software Architecture** Flavio Oquendo,2007-09-11 This book constitutes the refereed proceedings of the First European Conference on Software Architecture ECSA 2007 held in Aranjuez Spain The 12 revised long papers presented together with four short papers cover description languages and metamodels architecture based code generation run time monitoring requirements engineering service oriented architectures aspect oriented software architectures ontology based approaches autonomic systems middleware and web services *Designing Software-Intensive Systems: Methods and Principles* Tiako, Pierre F.,2008-07-31 This book addresses the complex issues associated with software engineering environment capabilities for designing real time embedded software systems Provided by publisher *Model-Based Product Line Engineering (MBPLE)* Marco Forlingieri,Tim Weilkiens,Hugo Guillermo Chalé-Gongora,2025-04-29 Clear and concise guide to MBPLE with industrial case studies Written in a to the point style Model Based Product Line Engineering MBPLE is the only theoretical and practical foundational book on MBPLE that brings together the topics of model based systems engineering MBSE and feature based product line engineering PLE It examines how PLE can benefit from a model based and model centric approach and in turn how MBSE combined with holistic PLE can boost model reuse and improve the MBSE business case The book combines both management and engineering aspects to deliver comprehensive coverage of the subject The book covers real life challenges and implementations of MBPLE discussing adoption obstacles faced by engineering organizations and how to overcome them to ensure a successful MBPLE deployment Dozens of SysML v2 views SysML v1 diagrams SysML v2 code snippets and illustrations are included throughout to elucidate key concepts Additional supplementary learning materials are available on

Software Product Lines in Action Frank J. van der Linden, Klaus Schmid, Eelco Rommes, 2007-06-10 Software product lines represent perhaps the most exciting paradigm shift in software development since the advent of high level programming languages Nowhere else in software engineering have we seen such breathtaking improvements in cost quality time to market and developer productivity often registering in the order of magnitude range While the underlying concepts are straightforward enough building a family of related products or systems by planned and careful reuse of a base of generalized software development assets the devil can be in the details as successful product line practice can involve organizational change business process change and technology change The authors ideally combine academic research results with industrial real world experiences thus presenting a broad view on product line engineering so that both managers and technical specialists will benefit from reading it After presenting a common framework for the description of the industrial case studies they capture the wealth of knowledge that eight companies have gathered during the introduction of the software product line engineering approach in their daily practice After reading this book you will understand all the relevant aspects regarding business architecture process and organizational issues of applying software product line engineering If you consider using a product line approach in your organization or if you want to improve your current practices you will find a rich set of useful information at your fingertips from practitioners to practitioners
