Reliable Software Technologies - Ada-Europe 2001 Dirk Craeynest, Alfred Strohmeier, 2003-06-29 The Sixth International Conference on Reliable Software Technologies Ada Europe 2001 took place in Leuven Belgium May 14-18 2001 It was sponsored by Ada Europe the European federation of national Ada societies in cooperation with ACM SIGAda and it was organized by members of the K U Leuven and Ada Belgium This was the 21st consecutive year of Ada Europe conferences and the sixth year of the conference focusing on the area of reliable software technologies The use of software components in embedded systems is almost ubiquitous planes fly by wire train signalling systems are now computer based mobile phones are digital devices and biological chemical and manufacturing plants are controlled by software to name only a few examples Also other non embedded mission critical systems depend more and more upon software For these products and processes reliability is a key success factor and often a safety critical hard requirement It is well known and has often been experienced that quality cannot be added to software as a mere afterthought This also holds for reliability Moreover the reliability of a system is not due to and cannot be built upon a single technology A wide range of approaches is needed the most difficult issue being their

purposeful integration Goals of reliability must be precisely defined and included in the requirements the development process must be controlled to achieve these goals and sound development methods must be used to fulfill these non functional requirements *Handbook of Research on the Role of Human Factors in IT Project Management* Misra, Sanjay,Adewumi, Adewole,2019-09-27 The role humans play in the field of information technology continues to hold relevance even with the industry s rapid growth People contribute heavily to the physical cognitive and organizational domain of computing yet there is a lack of exploration into this phenomenon Humanoid aspects of technology require extensive research in order to avoid marginalization and insufficient data The Handbook of Research on the Role of Human Factors in IT Project Management is a collection of innovative research on the methods and applications of the task of human characteristics in the design and development of new technology While highlighting topics including digitalization risk management and task analysis this book is ideally designed for IT professionals managers support executives project managers managing directors academicians researchers and students seeking current research on the dynamics of human influence in technological projects Trends in Enterprise Application Architecture Dirk Draheim,Gerald Weber,2007-10-24 This book constitutes the thoroughly refereed postproceedings of the 2nd International Conference on Trends in Enterprise Application Architecture TEAA 2006 It identifies issues in enterprise application architecture and proposes as well as evaluates a solution Topics of interest include model driven architecture enterprise development environments service oriented architecture data integration enterprise grid computing load balancing and enterprise component platforms

industry **Distributed Systems** Albert Fleischmann, 2012-12-06 The purpose of this book is to make the reader familiar with software engineering for distributed systems Software engineering is a valuable discipline in the development of software The reader has surely heard of software systems completed months or years later than scheduled with huge cost overruns systems which on completion did not provide the performance promised and systems so catastrophic that they had to be abandoned without ever doing any useful work Software engineering is the discipline of creating and maintaining software when used in conjunction with more general methods for effective management its use does reduce the incidence of horrors mentioned above The book gives a good impression of software engineering particularly for distributed systems It emphasises the relationship between software life cycles methods tools and project management and how these constitute the framework of an open software engineering environment especially in the development of distributed software systems There is no closed software engineering environment which can encompass the full range of software missions just as no single flight plan airplane or pilot can perform all aviation missions There are some common activities in software engineering which must be addressed independent of the applied life cycle or methodology Different life cycles methods related tools and project management approaches should fit in such a software engineering framework
