Software Process Technology Carlo Montangero, 1996-09-25 Content Description Includes bibliographical references and index *Software Process: Principles, Methodology, and Technology* Jean-Claude Derniame, Badara A. Kaba, David Wastell, 2006-08-18 1 Jean Claude Derniame Software process technology is an emerging and strategic area that has already reached a reasonable degree of maturity delivering products and significant industrial experiences This technology aims at supporting the software production process by providing the means to model analyse improve measure and whenever it is reasonable and convenient to automate software production activities In recent years this technology has proved to be effective in the support of many business activities not directly related to software production but relying heavily on the concept of process i e all the applications traditionally associated with workflow management This book concentrates on the core technology of software processes its principles and concepts as well as the technical aspect of software process support The contributions to this book are the collective work of the Promoter 2 European Working Group This grouping of 13 academic and 3 industrial partners is the successor of Promoter a working group responsible for creating a European software process community Promoter 2 aims at exploiting this emerging community to collectively develop remaining open issues to coordinate activities and to assist in the dissemination of results The title *Software Process Modelling and Technology* Fink94 was produced during Promoter 1 Being project based it presented the main findings and proposals of the different projects then being undertaken by the partners *Software Process Modelling and Technology* Anthony

Finkelstein, Jeff Kramer, Bashar Nuseibeh, 1994-10-11 Prominent contributors identify key research problems that shed light on convincing treatments of several fundamental concerns which have characterized the field to date After introducing process centred environments the text proposes a conceptual framework for describing and evaluating evolving software processes Discusses 10 projects the authors are involved with such as EPOS MERLIN ALF ADELE TEMPO SPADE and PADM Concludes with an assessment exercise which compares and appraises these projects *Software Process Technology*

Acuna, Natalia Juristo, 2006-01-27 Software Process Modeling brings together experts to discuss relevant results in software process modeling and expresses their personal view of this field This book focuses on new aspects of software process modeling Specifically it deals with socio technological aspects process modeling for new development types open source software dependability applications etc and organization change management The computer audience is placing growing demands on the software industry today Consumers are looking for more complex products that are at the same time easier to use Software developer organizations are expected to produce higher quality products and deliver them to the public faster In so doing however globally distributed development teams have to cope with understaffing and changing technologies The challenges for the software industry are apparently mounting Over the years a variety of software process models have been designed to structure describe and prescribe the software systems construction process Most recently software process modeling is increasingly dealing with new challenges raised by the tests that the software industry has to stand Software Process Modeling is designed for a professional audience of researchers and practitioners in industry The

book is also suitable for graduate level students in computer science

A Software Process Model Handbook for Incorporating People's Capabilities Silvia T. Acuna, Natalia Juristo, Ana Maria Moreno, Alicia Mon, 2006-06-03 A Software Process Model Handbook for Incorporating People's Capabilities offers the most advanced approach to date empirically validated at software development organizations This handbook adds a valuable contribution to the much needed literature on people related aspects in software engineering The primary focus is on the particular challenge of extending software process definitions to more explicitly address people related considerations The capability concept is not present nor has it been considered in most software process models The authors have developed a capabilities oriented software process model which has been formalized in UML and implemented as a tool A Software Process Model Handbook for Incorporating People's Capabilities guides readers through the incorporation of the individual's capabilities into the software process Structured to meet the needs of research scientists and graduate level students in computer science and engineering this book is also suitable for practitioners in industry

Warboys, 1994-01-26 The software process is the total set of software engineering activities necessary to develop and maintain software products Software process technology SPT deals with methods formalisms and tools for supporting the software process SPT has developed into a key technology in terms of its importance to software engineering environments systems integration cooperative working and business process re engineering This volume contains the proceedings of the third European Workshop on Software Process Technology It is organized into six parts architecture meta process and methodology process modeling concepts PML

concepts and paradigms experiences with SPT and related domains **Software Process Modeling** Silvia T. Acuna,Natalia Juristo,2005-03-10 This book brings together experts to discuss relevant results in software process modeling and expresses their personal view of this field It is designed for a professional audience of researchers and practitioners in industry and graduate level students Object-Oriented Technology: ECOOP '97 Workshop Reader Jan Bosch,Stuart Mitchell,2003-07-30 This book constitutes the joint refereed post conference proceedings of 12 workshops held in conjunction with the 11th European Conference on Object Oriented Programming ECOOP 97 in Jyväskylä Finland in June 1997 The volume presents close to 100 revised selected contributions including surveys by the respective workshop organizers The wealth of up to date information provided spans the whole spectrum of Object Technologies from theoretical and foundational issues to applications in a variety of domains **The Impact of CASE Technology on Software Processes** Daniel Cooke,1994 This review volume consists of articles concerning CASE technology and research as discussed from two perspectives For the most part the available CASE technology is intended to automate certain phases of the software development life cycle The book contains articles which focus on how the current technology alters the nature of software engineering efforts Papers which delve into the knowledge a software engineer needs to possess and how the software engineer s work content has or may change are included Cultural as well as technical considerations are discussed The current CASE technology exists to automate phases of the software development life cycle thus affecting software development in the short term but we cannot ignore the CASE research efforts toward a higher generation language Such a language should affect software development in the long term Papers suggesting how these languages may alter the nature of software engineering in the future are presented **Process Modelling** Bernd Scholz-Reiter,Hans-Dietrich Stahlmann,Arnim Nethe,2012-12-06 A process model is very often used for system analysis design and management in various application areas Using a process model has the advantage that it has only to be as precise as necessary within the parameters of the individual field of application whereas the precision externally is less important This makes process modeling easier and open for structuring The contributions deal with different approaches to process modelling especially in the areas of business process modelling logistics and production processes and water systems **Process Technology** Elisabetta Di Nitto,Alfonso Fuggetta,2012-12-06 Process Technology brings together in one place important contributions and up to date research results in this fast moving area Process Technology serves as an excellent reference providing insight into some of the most challenging research issues in the field Information Modelling and Knowledge Bases XVI Yasushi Kiyoki,Y. Kiyoki,Benkt Wangler,Hannu Jaakkola,Hannu Kangassalo,2005 Modelling of information is necessary in developing information systems Information is acquired from many sources by using various methods and tools It must be recognized conceptualized and conceptually organized efficiently so that users can easily understand and use it Modelling is needed to understand explain organize predict and reason on information It also helps to master the role and functions of components of information systems Modelling can be performed

with many different purposes in mind at different levels and by using different notions and different background theories It can be made by emphasizing users conceptual understanding of information on a domain level on an algorithmic level or on representation levels On each level the objects and structures used on them are different and different rules govern the behavior on them Therefore the notions rules theories languages and methods for modelling on different levels are also different It will be useful if we can develop theories and methodologies for modelling to be used in different situations because databases knowledge bases and repositories in knowledge management systems developed on the basis of models and used to technically store information are growing day by day In this publication the interest is focused on modelling of information and one of the central topics is modelling of time Scientific and technical papers of high quality are brought together in this book
