Software and Mind Andrei Sorin, 2013-01-01 Addressing general readers as well as software practitioners *Software and Mind* discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities But while useful in fields like mathematics and manufacturing this idea is generally worthless because most aspects of the world are too complex to be reduced to simple hierarchical structures Our software related affairs in particular cannot be represented in this fashion And yet all programming theories and development systems and all software applications attempt to reduce real world problems to neat hierarchical structures of data operations and features Using Karl Popper's famous principles of demarcation between science and pseudoscience the book shows that the mechanistic ideology has turned most of our software related activities into pseudoscientific pursuits Using mechanism as warrant the software elites are promoting invalid even fraudulent software notions They force us to depend on generic inferior systems instead of allowing us to develop software skills and to create our own systems Software mechanism emulates the methods of manufacturing and thereby restricts us to high levels of abstraction and simple isolated structures The benefits of software however can be attained only if we start with low level elements and learn to create complex interacting structures Software the book argues is a non mechanistic phenomenon So it is akin to language not to physical objects Like language it permits us to mirror the world in our minds and to communicate with it Moreover we increasingly depend on software in everything we do in the same way that we depend on language Thus being restricted to mechanistic software is like thinking and communicating while being restricted to some ready made sentences supplied by an elite Ultimately by impoverishing software our elites are achieving what the totalitarian elite described by George Orwell in *Nineteen Eighty Four* achieves by impoverishing language they are degrading our minds

FST TCS 2001: Foundations of Software Technology and Theoretical Computer Science Ramesh Hariharan,Madhavan Mukund,V. Vinay,2003-06-30 This volume contains the proceedings of the 21st international conference on the Foundations of Software Technology and Theoretical Computer Science FSTTCS 2001 organized under the auspices of the Indian Association for Research in Computing Science IARCS This year s conference attracted 73 submissions from 20 countries Each s mission was reviewed by at least three

independent referees In a departure from previous conferences the final selection of the papers making up the program was done through an electronic discussion spanning two weeks without a physical meeting of the Program Committee PC Since the PC of FSTTCS is distributed across the globe it is very difficult to fix a meeting whose time and venue is convenient for a substantial fraction of the PC Given this it was felt that an electronic discussion would enable all members to participate on a more equal footing in the final selection All reviews scores and comments were posted on a secure website with a mechanism for making updates and automatically sending notifications by email to relevant members of the PC All PC members participated actively in the discussion The general feedback on the arrangement was very positive so we hope to continue this in future years We have invited speakers this year Eric Allender Sanjeev Arora David Harel Colin Stirling and Uri Zwick We thank them for having readily accepted our invitation to talk at the conference and for providing abstracts and even full papers for the proceedings

Fundamentals of Digital Switching John C. McDonald, 2013-04-17 Since the publication of the first edition of Fundamentals of Digital Switching in 1983 there has been substantial improvement in digital switching technology and in digital networks Packet switching has advanced from a low speed data oriented switching approach into a robust broadband technology which supports services ranging from low speed data to video This technology has eclipsed the flexibility of circuit switching Fiber optic cable has advanced since the first edition and has substantially changed the technology of transmission to research in optical devices to find a still better means of This success has led switching Digital switching systems continue to benefit from the 100 fold improvement in the capabilities of semiconductor devices which has occurred during the past decade The chip industry forecasts a similar escalation in complexity during the next 10 years Networks of switching systems have changed due to regulatory policy reform in many nations including the breakup of the Bell System in the United States the introduction of new types of carriers in Japan competition in the United Kingdom and a reexamination of public policy in virtually all nations Standards bodies have been productive in specifying new capabilities for future networks involving interactive and distributive services through STM and ATM technologies
