Long, Fred Long, 1990-11-28 Report on the process session at chinon An introduction to the IPSE 2.5 project TRW's SEE sage MASP A model for assisted software processes Goal oriented decomposition Its application for process modelling in the PIMS project A metaphor and a conceptual architecture for software development environments Configuration management with the NSE Experiments with rule based process modelling in an SDE Principles of a reference model for computer aided software engineering environments An overview of the inscape environment Tool integration in software engineering environments The PCTE contribution to Ada programming support environments APSE The Tooluse approach to integration An experimental Ada programming support environment in the HP CASEdge integration framework Experience and conclusions from the system engineering environment prototype PROSYT Issues in designing object management systems Experiencing the next generation computing environment Group paradigms in discretionary access controls for object management systems Typing in an object management system OMS Environment object management technology Experiences opportunities and risks Towards formal description and automatic generation of programming environments Use and extension of PCTE The SPMMS information system User interface session CENTAUR Towards a software tool box for programming environments List of participants Reference Model for Frameworks of Software Engineering Environments (SEE) DIANE Publishing Company, 1994-03 Describes SEEs and assists the SEE architectural standardization process Covers a set of services needed to describe environment frameworks The particular services of the model are described to a degree that is complete enough for the model to be used to describe existing systems and proposals Also adopted by the European Computer Manufacturers Assoc **Ontologies for Software Engineering and Software Technology** Coral Calero, Francisco Ruiz, Mario Piattini, 2006-10-12 Communication is one of the main activities in software projects many such projects fail or encounter serious problems because the stakeholders involved have different understandings of the problem domain and or they use different terminologies Ontologies can help to mitigate these communication problems Calero and her coeditors mainly cover two applications of ontologies in software engineering and software technology sharing knowledge of the problem domain and using a common terminology among all stakeholders and filtering the knowledge when defining models and metamodels The editors structured the contributions into three parts first a detailed introduction into the use of ontologies in software engineering and software technology in general second the use of ontologies to conceptualize different process related domains such as software maintenance software measurement or SWEBOK initiated by IEEE third the use of ontologies as artifacts in several software processes like for example in OMG's MOF or MDA By presenting the advanced use of ontologies in software research and software projects this book is of benefit to software engineering researchers in both academia and industry *Successful Software Reengineering* Valenti,

Salvatore,2001-07-01 Software process reengineering has become highly visible over the past several years Efforts are being undertaken by organizations of all types and sizes as they attempt to deal with the challenges of quality complexity and competitiveness As an emerging technology the effectiveness and potential impact of process improvement efforts have been debated but not fully tested or validated At the very core of this technological evolution is the idea that the quality of a software product is highly dependent on the quality of the process used for its development Successful Software Reengineering examines the most recent theories models approaches and processes involved with the concept of software improvement and reengineering

Principles of CASE Tool Integration Alan W. Brown,David J. Carney,Edwin J. Morris,Dennis B. Smith,Paul F. Zarrella,1994-09-01 Computer Aided Software Engineering CASE tools typically support individual users in the automation of a set of tasks within a software development process Such tools have helped organizations in their efforts to develop better software within budget and time constraints However many organizations are failing to take full advantage of CASE technology as they struggle to make coordinated use of collections of tools often obtained at different times from different vendors This book provides an in depth analysis of the CASE tool integration problem and describes practical approaches that can be used with current CASE technology to help your organization take greater advantage of integrated CASE

Software and Data Technologies

Maria José Escalona, José Cordeiro, Boris Shishkov, 2013-01-03 This book constitutes the proceedings of the 6th International Conference on Software and Data Technologies ICSoft 2011 held in Seville Spain in July 12011 The 13 revised full papers presented together with 4 invited papers were carefully reviewed and selected from 220 submissions The papers are organized in topical sections on enterprise software technology software engineering distributed systems data management knowledge based systems

Software Process Automation

Alan M. Christie, 2012-12-06 Process automation provides a means to integrate people in a software development organization with the development process and the tools supporting that development This new technology may significantly improve software quality and development productivity However as yet there is little practical experience in its day to day use This book is for those who wish to explore the technology or are considering its adoption The monograph discusses the underlying concepts reviews in some detail two of the major process automation products relates process automation to process improvement and provides adoption guidelines Special emphasis is on the process modeling language ProNet which is commercially available The book is enriched by numerous examples tables and technical appendices

Information Modelling and Knowledge Bases XVI

Yasushi Kiyoki, Y. Kiyoki, Benkt Wangler, Hannu Jaakkola, Hannu Kangassalo, 2005 Modelling of information is necessary in developing information systems Information is acquired from many sources by using various methods and tools It must be recognized conceptualized and conceptually organized efficiently so that users can easily understand and use it Modelling is needed to understand explain organize predict and reason on information It also helps to master the role and functions of components of information systems Modelling can be performed with many different purposes in mind at different levels and by using different notions and different background theories It can be made by emphasizing users conceptual understanding of information on a domain level on an algorithmic level or on representation levels On each level the objects and structures used on them are different and different rules govern the behavior on them Therefore the notions rules theories languages and methods for modelling on different levels are also different It will be useful if we can develop theories and methodologies for modelling to be used in different situations because databases knowledge bases and repositories in knowledge management systems

developed on the basis of models and used to technically store information are growing day by day In this publication the interest is focused on modelling of information and one of the central topics is modelling of time Scientific and technical papers of high quality are brought together in this book

Foundations of Empirical Software Engineering Barry Boehm,Hans Dieter Rombach,Marvin V. Zelkowitz,2005-05-13 Although software engineering can trace its beginnings to a NATO conference in 1968 it cannot be said to have become an empirical science until the 1970s with the advent of the work of Prof Victor Robert Basili of the University of Maryland In addition to the need to engineer software was the need to understand software Much like other sciences such as physics chemistry and biology software engineering needed a discipline of observation theory formation experimentation and feedback By applying the scientific method to the software engineering domain Basili developed concepts like the Goal Question Metric method the Quality Improvement Paradigm and the Experience Factory to help bring a sense of order to the ad hoc developments so prevalent in the software engineering field On the occasion of Basili's 65th birthday we present this book containing reprints of 20 papers that defined much of his work We divided the 20 papers into 6 sections each describing a different facet of his work and asked several individuals to write an introduction to each section Instead of describing the scope of this book in this preface we decided to let one of his papers the keynote paper he gave at the International Conference on Software Engineering in 1996 in Berlin Germany to lead off this book He better than we can best describe his views on what is experimental software engineering

Computer-Aided Method Engineering: Designing CASE Repositories for the 21st Century Dahanayake, Ajantha,2000-07-01 Computer aided method engineering is about generation and use of information systems design techniques according to user needs Some times such environments are called generic tools or MetaCASE This book presents the methodology and architecture of a CASE repository
