Meteorites and the Early Solar System II Dante S. Lauretta, Harry Y. McSween, 2006-07 They range in size from microscopic particles to masses of many tons The geologic diversity of asteroids and other rocky bodies of the solar system are displayed in the enormous variety of textures

and mineralogies observed in meteorites The composition chemistry and mineralogy of primitive meteorites collectively provide evidence for a wide variety of chemical and physical processes This book synthesizes our current understanding of the early solar system summarizing information about processes that occurred before its formation It will be valuable as a textbook for graduate education in planetary science and as a reference for meteoriticists and researchers in allied fields worldwide

The Genesis Mission C.T. Russell, 2011-06-27 NASA's Genesis mission launched on August 8 2001 is the fifth mission in the Discovery series Genesis addresses questions about the materials and processes involved in the origin of the solar system by providing precise knowledge of solar isotopic and elemental compositions for comparison with the compositions of meteoritic and planetary materials This book describes the Genesis mission the solar wind collector materials the solar wind concentrator and simulations of its performance the plasma ion and electron instruments and the way these two instruments are used to determine the solar wind flow regime on board the spacecraft The book is of interest to all potential users of the data returned by the Genesis mission to those studying the isotopic and chemical composition of the early solar system whose work will be influenced by the measurements made by Genesis and by all those interested in the design and implementation of space instruments to study space plasmas

Heliophysical Processes Natchimuthuk Gopalswamy, S.S. Hasan, Ashok Ambastha, 2010-03-20 An outgrowth of the first Asia Pacific Regional School on the International Heliophysical Year IHY this volume contains a collection of review articles describing the universal physical processes in the heliospace influenced by solar electromagnetic and mass emissions The Sun affects the heliosphere in the short term space weather and in the long term space climate through numerous physical processes that exhibit similarities in various spatial domains of the heliosphere The articles take into account various aspects of the Sun heliosphere connection under a systems approach This volume will serve as a ready reference work for research in the emerging field of heliophysics which describes the physical processes taking place in the physical space controlled by the Sun out to the local interstellar medium

The Advanced Composition Explorer Mission C.T. Russell, R.A. Mewaldt, T.T. von Rosenvinge, 2012-12-06 NASA's Advanced Composition Explorer ACE was launched on August 25 1997 carrying six high resolution spectrometers that measure the abundances of the elements isotopes and ionic charge states of energetic nuclei in space Data from these instruments is being used to measure and compare the composition of the solar corona the nearby interstellar medium and cosmic ray sources in the Galaxy and to study particle acceleration processes in a variety of environments ACE also includes three instruments that monitor solar wind and energetic particle activity near the inner Lagrangian point 1.5 million kilometers sunward of Earth and provide continuous real time data to NOAA for use in forecasting space weather Eleven of the articles in this volume review scientific progress and outline questions that ACE will address in solar space plasma and cosmic ray physics Other articles describe the ACE spacecraft the real time solar wind system and the instruments used to measure energetic particle composition

To the Edge of the Solar System and Beyond I. H. Cairns, Giancarlo Genta, Klaus Scherer, 2004

High-Redshift Galaxies Immo Appenzeller, 2009-06-17 The high redshift galaxies became a distinct research field during the final decade of the 20th century At that time the Lyman break technique made it possible to identify significant samples of such objects and the new generation of 8 to 10 m telescopes resulted in the first good spectroscopic data Today the high redshift galaxies have developed into one of the important topics of astrophysics accounting for about 5-10% of the publications in the major scientific journals devoted to astronomy Because high redshift galaxies is a rapidly developing field and since new results are published constantly writing a book on this topic is challenging On the other hand in view of the large amount of individual results now in the literature and in view of the still growing interest in this topic it appears worthwhile to summarize and evaluate the available data and to provide an introduction for those who wish to enter this field or who for various reasons might be interested in its results The end of the first decade of the 21st century appears to be a good point in time to attempt such a summary The current generation of ground based 8 to 10 m optical telescopes the Hubble Space Telescope and the most important large radio telescopes have by now been in operation since about one or two decades Although these instruments will continue to produce important scientific results for some time to come many of the initial programs exploiting their unique new possibilities have been completed
