Physics of the Solar Corona Markus Aschwanden, 2004-09 A thorough introduction to solar physics based on recent spacecraft observations The author introduces the solar corona and sets it in the context of basic plasma physics before moving on to discuss plasma instabilities and plasma heating processes The latest results on coronal heating and radiation are presented Spectacular phenomena such as solar flares and coronal mass ejections are described in detail together with their potential effects on the Earth

The Solar Corona Leon Golub, Jay M. Pasachoff, 1997-08-21 Observations from the ground and space have advanced our knowledge of the solar corona dramatically over the last three decades This textbook is the first to present this new understanding at a level appropriate for advanced undergraduate and graduate students and researchers seeking an entry point into the research literature This timely volume presents a lucid and synthesised review of the latest observations of the solar corona and how they have advanced and shaped our understanding of coronal physics This book provides a much needed introduction to coronal physics for advanced students and researchers

A Guide to the Solar Corona Donald E. Billings, 2013-10-22 A Guide to the Solar Corona is specifically directed to the space scientist or engineer who is not a specialist in solar physics but whose work requires a fairly detailed knowledge of the corona It is hoped that the material may prove useful to most graduate students in astrophysics while solar physicists may find some topics of interest and value to them The book contains 12 chapters and begins with three descriptive chapters that provide the casual reader with a concept of the corona as it is evident through more or less direct observation Topics covered include the development of coronal science observational techniques and observational aspects of the corona The next chapter discusses methods of analyzing coronal data Subsequent chapters present theoretical considerations as they are applicable to the corona These combine theory with observation to provide a description of the various aspects of the corona The final chapter is a combination of established ideas and speculation on the place of the corona in the universe

Eclipsed Suns, the Solar Corona and Exoplanets Pierre Léna, Serge Koutchmy, 2025-08-20 This is the unique story of observing a total solar eclipse for no less than 74 consecutive minutes On the summer morning of June 30 1973 the Sun rises on the Canary Islands But it is strangely indented by the Moon The eclipse of the century has just begun From the west the lunar shadow rushes to the African coast at a velocity of over 2000 kilometers per hour Astronomers on the ground will enjoy seven short minutes of total eclipse too short for Pierre Léna and seven scientists who board the Concorde 001 prototype an extraordinary plane to become the first commercial supersonic aircraft With Andr Turcat as chief pilot and his crew of five at 17000 m altitude the aircraft remains in the lunar shadow for 74 minutes a record time of scientific observations allowing for exceptional measurements and not yet beaten Science technology aviation and history combine in the story of a unique human adventure aboard a legendary aircraft illustrated with a rich and original iconography It reflects the wonderful domains that science and technology can open and the passion in the professions they offer Fifty years after this flight the

Sun's corona has yet to reveal all its secrets. A tenuous cloud of gas and dust it influences the Earth creates the aurora borealis, affects communications and can endanger satellites. To better understand it we need to decipher its images. This enlarged second edition adds two full chapters dedicated to the solar corona and its plasma and its dust. In a final chapter the authors make the link to today's great adventure of astrophysics: the search for exoplanets, Earth's twin sisters around stars not too far from the Sun which are detected and studied through eclipses of their host stars. This book testifies to the horizons of science and the unprecedented emotions it can bring to us all. A must read for every eclipse chaser and fan of true scientific adventures. Pierre L. Na is emeritus professor at Paris Observatory. Serge Koutchmy, 1940-2023, was a recognised solar astronomer and eclipse specialist.

The Solar Corona John W. Evans, 2013-10-22. The Solar Corona covers the proceedings of the International Astronomical Union Symposium No 16 held at Cloudcroft, New Mexico, U.S.A. on August 28-30, 1961. The book focuses on the characteristics, reactions and analysis of the solar corona. The selection first offers information on the local physics of the corona and comments on coronal heating. Discussions focus on density, temperature, energy balance, excitation and ionization and electrostatic ejection of light ions. The text then takes a look at the temperature of the solar corona and relative populations of Fe in the corona. The publication tackles excitation of the red and green coronal lines, filamentary structure of the solar corona, prediction of solar emission lines in the short wave region of the spectrum and prominences of the solar corona. The text then examines the study of the corona by radar, rockets and satellites, slow variations of the solar corona and influence of flares on the associated permanent coronal condensation. The selection is a vital source of data for scientists and readers interested in the solar corona.

Theoretical and Observational Problems Related to Solar Eclipses Z. Mouradian, Magda Stavinschi, 2012-12-06. The NATO ARW on the problems of ground based observations of Solar Eclipses was held in Sinaia, Romania, between 1 and 5 June 1996. The Workshop was divided into seven sessions in which 17 papers were given by key speakers along with 30 oral presentations. Additionally 30 posters were presented. This issue contains only the invited and oral papers. The posters are to be published in a special issue of the Romanian Astronomical Journal. The contributions were based on our present knowledge of solar corona physics and on the perspectives for future total eclipse observations focussing especially on that of August 11, 1999 which will be the last eclipse of the century. The workshop sessions reviewed the results of past eclipse observations, coronal hot and cold structures, coronal heating, public education and instrumental problems. At the end of the meeting a fruitful general discussion drew out problems to be studied and techniques to be used for forthcoming observations. Posters completed the workshop contributions.

Magnetohydrodynamics of Plasma Relaxation S. Ortolani, Dalton D. Schnack, 1993. This book gives a concise description of the phenomenon of plasma relaxation from the point of view of resistive magnetohydrodynamic (MHD) theory. Magnetized plasmas relax when they seek their natural state of lowest energy subject to certain topological

constraints imposed by the magnetic field Relaxation may be fast and dynamic or slow and gradual depending on the external environment in which the magnetoplasma system evolves Relaxation occurs throughout the universe and may describe such diverse phenomena as dynamos solar flares and the operation of magnetic fusion energy experiments This book concentrates on the dynamic rather than variational aspects of relaxation While the processes described are general the book focuses on the reversed field pinch experiment as a paradigm for plasma relaxation and dynamo action Examples from other branches of plasma physics are also discussed The authors draw upon their extensive experience in numerical and experimental studies of relaxation
