*Understanding LDAP - Design and Implementation* Steven Tuttle,Ami Ehlenberger,Ramakrishna Gorthi,Jay Leiserson,Richard Macbeth,Nathan Owen,Sunil Ranahandola,Michael Storrs,Chunhui Yang,IBM Redbooks,2006-07-19 The implementation and exploitation of centralized corporate wide directories are among the top priority projects in most organizations The need for a centralized directory emerges as organizations realize the overhead and cost involved in managing the many distributed micro and macro directories introduced in the past decade with decentralized client server applications and network operating systems Directories are key for successful IT operation and e

business application deployments in medium and large environments IBM understands this requirement and supports it by providing directory implementations based on industry standards at no additional cost on all its major platforms and even important non IBM platforms The IBM Directory Server implements the Lightweight Directory Access Protocol LDAP standard that has emerged quickly in the past years as a result of the demand for such a standard This IBM Redbooks publication will help you create a foundation of LDAP skills as well as install and configure the IBM Directory Server It is targeted at security architects and specialists who need to know the concepts and the detailed instructions for a successful LDAP implementation

**Mobile IP** Skyler Lewis & Brett Anderson, 2018-04-26 Mobile IP is most often found in wired and wireless environments where users need to carry their mobile devices across multiple LAN subnets Examples of use are in roaming between overlapping wireless systems e g IP over DVB WLAN WiMAX and BWA Mobile IP is not required within cellular systems such as 3G to provide transparency when Internet users migrate between cellular towers since these systems provide their own data link layer handover and roaming mechanisms However it is often used in 3G systems to allow seamless IP mobility between different packet data serving node PDSN domains Mobile IP is an Internet Engineering Task Force IETF standard communications protocol that is designed to allow mobile device users to move from one network to another while maintaining their permanent IP address Defined in Request for Comments RFC 2002 Mobile IP is an enhancement of the Internet Protocol IP that adds mechanisms for forwarding Internet traffic to mobile devices known as mobile nodes when they are connecting through other than their home network Mobile IP communication protocol refers to the forwarding of Internet traffic with a fixed IP address even outside the home network It allows users having wireless or mobile devices to use the Internet remotely Mobile IP is mostly used in WAN networks where users need to carry their mobile devices across different LANs with different IP addresses Mobile IP is not a wireless protocol However it could be employed for the IP infrastructure of cellular networks The principle objective of this book are to provide an introduction to basic concepts and methodologies for mobile communication and to develop a foundation that can be used the basis for further study and research in the field of communication engineering

**Management Enabling the Future Internet for Changing Business and New Computing Services** Choong Seon Hong,Toshio Tonouchi,Yan Ma,Chi-Shih Chao,2009-09-19 We are delighted to present the proceedings of the 12th Asia Paci c

Network Operations and Management Symposium APNOMS 2009 which was held in Jeju Korea during September 23-25, 2009. Recently various convergences in wired and wireless networks and convergence of telecommunications and broadcastings are taking place for ubiquitous multimedia service provisioning. For example, broadband IP MPLS wired networks are actively converged with IEEE 802.11e wireless LAN, IEEE 802.16 Wireless MAN, 3G/4G wireless cellular networks, and direct multimedia broadcast DMB networks. For efficient support of service provisioning for ubiquitous multimedia services on the broadband convergence networks, well designed and implemented network operations and management functions with QoS guaranteed traffic engineering are essential. The converged network will open the way for a new world with emerging new businesses and computing services. The Organizing Committee (OC) selected "Management Enabling the Future Internet for Changing Business and New Computing Services" as the timely theme of APNOMS 2009. Contributions from academia, industry, and research institutions met these challenges with 173 paper submissions, from which 41 high quality papers (23.7% of the submissions) were selected for technical sessions as full papers, and 32 papers were selected as short papers. In addition, we had nine papers in innovation sessions for ongoing research. Diverse topics were covered, including Traffic Trace Engineering, Congestion and Fault Management, Management of IP Based Networks, Autonomous and Distributed Control, Sensor Network and P2P Management, Converged Networks and Traffic Engineering, SLA and QoS Management, Active and Security Management, Wireless and Mobile Network Management, and Security Management.
