

# Small scale evaluations in school children in other countries:

Although numbers involved in individual studies are fairly small, all reveal a consistent pattern of increased signs of neuro-motor immaturity in children generally, with higher incidence in children who are under-achieving or receiving support for language, learning or behavioural problems.

Percentage of children in this category varies across regions and may or may not be related to socio-economic factors. Poverty is not necessarily the sole determinant, with children in more affluent areas sometimes showing similar signs. This may be the result of changes in early child caring practises including over-use of baby equipment, less time engaged in unrestricted physical play and social interaction, over exposure to electronic media and more sedentary lifestyles.

These are all areas for further investigation.

Key features include discussion of different approaches to evaluation and how to choose between them. The advantages and disadvantages of randomized controlled trials (RCTs), Realist evaluation and its increasing importance. The centrality of ethical and political issues. The influence and opportunity of the Internet. Tightly focused on the realities of carrying out small scale evaluation. *Small Scale Evaluation* is a highly practical guide covering the needs of both social scientists and others without this background. Over the years, educators concerned with continuing education (CE) for health professionals have either heard or voiced that question in one form or another more than once. But because of the difficulty in measuring the specific effects of a given course, program or

conference the question has not been answered satisfactorily Since CE is costly since CE is now mandated in some states for re registration and since its worth has not been proven in for mal evaluation research the pressure to evaluate remains strong The question can be partially answered by a more careful definition of continuing education particularly the goals to be achieved by CEo Another part of the answer depends on the development of a stronger commitment to evaluation of CE by its providers But a significant part of the answer might be provided through the improvement of methods used in evaluation of continuing education for health professionals To address this last concern the Development and Demonstration Center in Continuing Education for the Health Professions of the Univer sity of Southern California organized and conducted a meeting of academi cians and practitioners in evaluation of continuing education During a three day period participants heard formal presentations by five invited speakers and then discussed the application of the state of the art of educa tional evaluation to problems of evaluation of continuing education for health professionals
