**Smart Actuation and Sensing Systems** Eden Slaver, 2016-09-15 The advent of integrated circuits which became possible because of the tremendous progress in semiconductor technology resulted in the low cost microprocessor Thus if it is possible to design a low cost sensor which is silicon based then the overall cost of the control system can be reduced We can have integrated sensors which has electronics and the transduction element together on one silicon chip This complete system can be called as system on chip The main aim of integrating the electronics and the sensor is to make an intelligent sensor which can be called as smart sensor Smart sensors then have the ability to make some decision Physically a smart sensor consists of transduction element signal conditioning electronic and controller processor that support some intelligence in a single package A smart sensor is a device that takes input from the physical environment and uses built in

compute resources to perform predefined functions upon detection of specific input and then process data before passing it on. Smart sensors enable more accurate and automated collection of environmental data with less erroneous noise amongst the accurately recorded information. These devices are used for monitoring and control mechanisms in a wide variety of environments including smart grids, battlefield reconnaissance, exploration, and a great number of science applications. A smart actuator is the integrated actuator of all components such as motor controller, sensors, and communication unit. The robot which is linked to a smart actuator can be assembled or disassembled and reconfigured. Therefore, there are increasing demands from industries for a smart sensor and actuator.

*Smart Actuation and Sensing Systems: Recent Advances and Future Challenges* emphasizes on accomplishments in the area of Smart Actuators and Smart Sensors to combine researchers and scientists from different fields into a single virtual room. The book hence reflects the multicultural nature of the field and will allow the reader to taste and appreciate different points of view, different engineering methods, and different tools that must be jointly considered when designing and realizing smart actuation and sensing systems.

The book *Smart Sensors and MEMS* provides a unique collection of contributions on latest achievements in sensors area and technologies that have been made by eleven internationally recognized leading experts from Czech Republic, Germany, Italy, Israel, Portugal, Switzerland, Ukraine, and USA during the NATO Advanced Study Institute (ASI) in Póvoa de Varzim, Portugal, from 8 to 19 September 2003. The aims of this volume are to disseminate wider and in-depth theoretical and practical knowledge about smart sensors and its applications to create a clear consciousness about the effectiveness of MEMS technologies, advanced signal processing and conversion methods to stimulate the theoretical and applied research in these areas, and promote the practical using of these techniques in the industry. With that in mind, a broad range of physical, chemical, and biosensors design principles, technologies, and applications were included in the book. It is a first attempt to describe in the same book different physical, chemical, biological sensors and MEMS technologies suitable for smart sensors creation. The book presents the state of the art and gives an excellent opportunity to provide a systematic in-depth treatment of the new and rapidly developing field of smart sensors and MEMS. The volume is an excellent guide for practicing engineers, researchers, and students interested in this crucial aspect of actual smart sensor design.
