strategies that can vastly improve your child's brain power and reduce his or her chances of developing ADD and ADHD. For example, you can stimulate memory by changing a component on the over-the-crib mobile every week, making the baby compare what was there before to what's there now, reinforcing memory pathways in the brain that are critical for learning. Spread out those shots. Schedule more frequent trips to the pediatrician for vaccinations so that fewer shots are administered at once. Flooding the immune system with a cocktail of different vaccines can damage the nervous system. Get rid of toxins. Protecting a child from neurotoxins found in foods, toys, and even baby bottles can help preserve precious IQ points. Inside Dr. Perlmutter provides a scientifically backed food and supplement plan for children and nursing mothers and details the many brain-building activities that you can do with your child. In addition, he reveals the numerous toys and household products that contain harmful brain-damaging toxins and shows how to identify and combat common childhood problems like ADD and food allergies that may affect your child's development.
