Metallic Amorphous Alloy Reinforcements in Light Metal Matrices S. Jayalakshmi, M. Gupta, 2015-02-24 This book presents cutting edge research on the design and development of novel advanced high strength light weight materials via the incorporation of novel reinforcements namely metallic amorphous alloys bulk metallic glasses BMG in light metal matrix composites LMMCs based on Al and Mg The book begins with an introduction to conventional ceramic reinforced light metal matrix composites along with the major drawbacks which limit their application Metallic amorphous alloys Bulk Metallic Glasses BMG are new class of metallic materials that are distinctly differently from conventional metals alloys in terms of their structure and thermal behavior and exhibit extremely high strength 1 to 2 GPa and large elastic strain limit 1 to 2% Given these unique properties upon their incorporation into Al Mg matrices they provide superior interfacial properties i e high degree of compatibility with the matrix due to their metallic nature when compared to

conventional ceramic reinforcements and thereby significantly enhance the mechanical performance of LMMCs Amorphous BMG reinforced LMMCs is an emerging research field and the existing literature is meager This book discusses the various processing methods that would be suitable for these novel materials A comparison of mechanical properties and strengthening mechanisms of amorphous BMG reinforced composites with those of conventional ceramic composites is presented Future research directions and wider research potential of the novel materials are discussed and prospective applications are highlighted For ease of understanding and comparison appropriate schematics tables and figures are provided

Using the Engineering Literature Bonnie A. Osif,2006-08-23 The field of engineering is becoming increasingly interdisciplinary and there is an ever growing need for engineers to investigate engineering and scientific resources outside their own area of expertise However studies have shown that quality information finding skills often tend to be lacking in the engineering profession Using the Engineerin Using the Engineering Literature, Second Edition Bonnie A. Osif,2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of Using the Engineering Literature used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age Using the Engineering Literature Second Edition provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format
