Wildland Fire Michael John Gollner, Xinyan Huang, Jason John Sharples, Melanie C. Rochoux, 2020-08-28 **Wildland Fire Behaviour** Mark A. Finney, Sara S. McAllister, Jason M. Fortthofer, Torben P. Grumstrup, 2021-11 Wildland fires have an irreplaceable role in sustaining many of our forests shrublands and grasslands They can be used as controlled burns or occur as free burning wildfires and can sometimes be dangerous and destructive to fauna human communities and natural resources Through scientific understanding of their behaviour we can develop the tools to reliably use and manage fires across landscapes in ways that are compatible with the constraints of modern society while benefiting the ecosystems The science of wildland fire is incomplete however Even the simplest fire behaviours how fast they spread how long they burn and how large they get arise from a dynamical system of physical processes interacting in unexplored ways with heterogeneous biological ecological and meteorological factors across many scales of time and space The physics of heat transfer combustion and ignition for example operate in all fires at millimetre and millisecond scales but wildfires can become conflagrations that burn for months and exceed millions of hectares **Wildland Fire Behaviour Dynamics Principles and Processes** examines what is known and unknown about wildfire behaviours The authors introduce fire as a dynamical system along with traditional steady state concepts They then break down the system into its primary physical components describe how they depend upon environmental factors and explore system dynamics by constructing and exercising a nonlinear model The limits of modelling and knowledge are discussed throughout but emphasised by review of large fire behaviours Advancing knowledge of fire behaviours will require a multidisciplinary approach and rely on quality measurements from experimental research as covered in the final chapters *An Ounce of Prevention* Johanna Wellheiser, Jude Scott, Canadian Archives Foundation, 2002-02-11 *An Ounce of Prevention* is a comprehensive and practical guide to the process of disaster planning This completely revised and expanded publication builds on the strengths of its award winning predecessor Used as a planning tool it will help you develop strategies for effective disaster prevention and recovery **Fire Phenomena and the Earth System** Claire M. Belcher, 2013-04-08 Fire plays a key role in Earth system processes Wildfires influence the carbon cycle and the nutrient balance of our planet and may even play a role in regulating the oxygen content of our atmosphere The evolutionary history of plants has been intimately tied to fire and this in part explains the distribution of our ecosystems and their ability to withstand the effects of natural fires today **Fire Phenomena and the Earth System** brings together the various subdisciplines within fire science to provide a synthesis of our understanding of the role of wildfire in the Earth system The book shows how knowledge of fire phenomena and the nature of combustion of natural fuels can be used to understand modern wildfires interpret fire events in the geological record and to understand the role of fire in a variety of Earth system processes By bringing together chapters written by leading international researchers from a range of geological environmental chemical and engineering disciplines the book will

stimulate the exchange of ideas and knowledge across these subject areas Fire Phenomena and the Earth System provides a truly interdisciplinary guide that can inform us about Earth's past present and beyond Readership Advanced students and researchers across a wide range of earth environmental and life sciences including biogeochemistry paleoclimatology atmospheric science palaeontology and paleoecology combustion science ecology and forestry *Fire Safety of Interior Textiles* Johanna Tomann,1993

Lees' Loss Prevention in the Process Industries Frank Lees,2005-01-25 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is

and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field

Understanding Metaphor through Corpora Katie Patterson,2018-05-11 This book introduces a unique methodology to the study of metaphor integrating a corpus linguistic approach to explore the lexical grammatical semantic and pragmatic characteristics of metaphoric instances of language The volume questions the reliability of attempts to identify metaphor based on dichotomy and drawing on data from a corpus of nineteenth century writing instead advocates for the notion that metaphoricity is context dependent and fluid in relation to the respective social and discourse contexts in which metaphors can be found The book also applies Lexical Priming Theory to metaphoric language to suggest that our use of metaphor is due to unconscious behaviors a counterpoint to perspectives that see metaphor use as part of the creative process Taken as a whole the volume calls for a deeper investigation of the complex web of meaning senses that contributes to our understanding of metaphor making this key reading for students and researchers in corpus linguistics metaphor studies lexicography semantics and pragmatics
