From Web to Workplace Kaj Grøn bæk, Randall H. Trigg, 1999 Kaj Grøn bæk and Randall H Trigg present a set of principles for the design of open hypermedia systems and provide concrete implications of these principles for issues ranging from data structures to architectures and system integration and for settings as diverse as the World Wide Web and the workplace In this book Kaj Grøn bæk and Randall H Trigg present a set of principles for the design of open hypermedia systems and provide concrete implications of these principles for issues ranging from data structures to architectures and system integration and for settings as diverse as the World Wide Web and the workplace The principles which cover both hypermedia system processing and data structures reflect results from decades of hypermedia research including the popular Dexter hypertext reference model and the authors own extended object oriented version of the Dexter model One important principle is the notion of links as first class objects outside the data Emerging systems such as HyperWave Microcosm and Devise Hypermedia apply this principle to extend the capabilities of the Web The authors also discuss the management of incomplete and dangling links time based media including video and sound support for collaboration and shared hypermedia structures worldwide distribution and integration of third party applications in open hypermedia systems

Crypto Anarchy, Cyberstates, and Pirate Utopias Peter Ludlow, 2001-05-25 A wide ranging collection of writings on emerging political structures in cyberspace In *Crypto Anarchy Cyberstates and Pirate Utopias* Peter Ludlow extends the approach he used so successfully in *High Noon on the Electronic Frontier* offering a collection of writings that reflects the eclectic nature of the online world as well as its tremendous energy and creativity This time the subject is the emergence of governance structures within online communities and the visions of political sovereignty shaping some of those communities Ludlow views virtual communities as laboratories for conducting experiments in the construction of new societies and governance structures While many online experiments will fail Ludlow argues that given the synergy of the online world new and superior governance structures may emerge Indeed utopian visions are not out of place provided that we understand the new utopias to be fleeting localized islands in the Net and not permanent institutions The book is organized in five sections The first section considers the sovereignty of the Internet The second section asks how widespread access to resources such as *Pretty Good Privacy* and anonymous remailers allows the possibility of *Crypto Anarchy* essentially carving out space for

activities that lie outside the purview of nation states and other traditional powers The third section shows how the growth of e commerce is raising questions of legal jurisdiction and taxation for which the geographic boundaries of nation states are obsolete The fourth section looks at specific experimental governance structures evolved by online communities The fifth section considers utopian and anti utopian visions for cyberspace Contributors Richard Barbrook John Perry Barlow William E Baugh Jr David S Bennahum Hakim Bey David Brin Andy Cameron Dorothy E Denning Mark Dery Kevin Doyle Duncan Frissell Eric Hughes Karrie Jacobs David Johnson Peter Ludlow Timothy C May Jennifer L Mnookin Nathan Newman David G Post Jedediah S Purdy Charles J Stivale
