Soft Computing For Risk Evaluation And Management Applications In Technology Environment And Finance:

Soft Computing for Risk Evaluation and Management Da Ruan, Mario Fedrizzi, 2012-08-10 Risk is a crucial element in virtually all problems people in diverse areas face in their activities. It is impossible to find adequate models and solutions without taking it into account. Due to uncertainty and complexity in those problems, traditional hard tools and techniques may be insufficient for their formulation and solution. This is the first book in the literature that shows how soft computing methods, fuzzy logic, neural networks, genetic algorithms, etc., can be employed to deal with various problems related to risk analysis, evaluation, and management in various fields of technology, environment, and finance.

Soft Computing and its Applications in Business and Economics Rafik Aziz Aliev, Bijan Fazlollahi, Rashad Rafik Aliev, 2012-08-10 Soft Computing and its Applications in Business and Economics or SC BE for short is a work whose importance is hard to exaggerate. Authored by leading contributors to soft computing and its applications, SC BE is a sequel to an earlier book by Professors R A Aliev and R R Aliev. Soft Computing and Its Applications, World Scientific, 2001. SC BE is a self-contained exposition of the foundations of soft computing and presents a vast compendium of its applications to business, finance, decision analysis, and economics. One cannot but be greatly impressed by the wide variety of applications, ranging from use of fuzzy logic in transportation and health care systems to use of a neuro-fuzzy approach to modeling of credit risk in trading and application of soft computing to e-commerce. To view the contents of SC BE in a clearer perspective, a bit of history is in order. In science, as in other realms of human activity, there is a tendency to be nationalistic, to commit oneself to a particular methodology, and to relegate to a position of inferiority or irrelevance all alternative methodologies. As we move further into the age of machine intelligence and automated reasoning, we run into more and more problems which do not lend themselves to solution through the use of our favorite methodology.

Fuzzy Engineering Economics with Applications Cengiz Kahraman, 2008-09-20 Fuzzy set approaches are suitable to use when the modeling of human knowledge is necessary and when human evaluations are needed. Fuzzy set theory is recognized as an important problem modeling and solution technique. It has been studied extensively over the past 40 years. Most of the early interest in fuzzy set theory pertained to representing uncertainty in human cognitive processes. Fuzzy set theory is now applied to problems in engineering, business, medical, and related health sciences and the natural sciences. This book handles the fuzzy cases of classical engineering economics topics. It contains 15 original research and application chapters including different topics of fuzzy engineering economics. When no probabilities are available for states of nature, decisions are given under uncertainty. Fuzzy sets are a good tool for the operations research analyst facing uncertainty and subjectivity. The main purpose of the first chapter is to present the role and importance of fuzzy sets in the economic decision-making problem with the literature review of the most recent advances.

Lecture Notes in Real-Time Intelligent Systems Jolanta Mizera-Pietraszko, Pit Pichappan, 2017-08-07 Intelligent computing refers greatly to artificial intelligence with the aim at making computer to act as a human. This newly

developed area of real time intelligent computing integrates the aspect of dynamic environments with the human intelligence. This book presents a comprehensive practical and easy to read account which describes current state of the art in designing and implementing real time intelligent computing to robotics, alert systems, IoT, remote access control, multi agent systems, networking, mobile smart systems, crowd sourcing, broadband systems, cloud computing, streaming data and many other applications areas. The solutions discussed in this book will encourage the researchers and IT professional to put the methods into their practice.

A Tribute to Prof. Dr. Da Ruan Jie Lu, Etienne Kerre, 2012-07-18. This volume is a tribute to Professor Dr Da Ruan who passed away suddenly on July 31 2011 aged 50. The flood of emails that spread throughout the fuzzy logic research community with the tragic news was testimony to the respect and liking felt for this remarkable man. Da was a hardworking highly productive scientist who during his short life published 35 books and more than 250 research papers in highly ranked journals and conference proceedings. He established two successful conferences FLINS and ISKE as well as the international journal JCIS. This book is a collection of contributions from 88 of Da's academic friends from 47 institutes presented in 60 chapters and over 70 pictures. A Foreword by Lotfi Zadeh begins Da's story. Section 1 provides an overview of Da's funeral on August 6 2011. Part II outlines Da's scientific life his education scientific career publications and keynote talks. Part III presents testimonials by Da's colleagues of academic activities including guest professorships and his many visits to foreign institutes. Part IV contains thirty contributions from colleagues and friends across the world to describe their collaborative experience with Da. We hope this book will keep the memory of Da alive: great scientist, great friend, great humanitarian. He will remain in our hearts forever.

Business Intelligence in Economic Forecasting: Technologies and Techniques Wang, Jue, Wang, Shouyang, 2010-06-30. With the rapid development of economic globalization and information technology the field of economic forecasting continues its expeditious advancement providing business and government with applicable technologies. This book discusses various business intelligence techniques including neural networks, support vector machine, genetic programming, clustering analysis, TEI, I fuzzy systems, text mining and many more. It serves as a valuable reference for professionals and researchers interested in BI technologies and their practical applications in economic forecasting as well as policy makers in business organizations and governments.

Computational Intelligence in Economics and Finance Paul P. Wang, 2013-03-09. Due to the ability to handle specific characteristics of economics and finance forecasting problems like e.g. non linear relationships, behavioral changes or knowledge based domain segmentation we have recently witnessed a phenomenal growth of the application of computational intelligence methodologies in this field. In this volume Chen and Wang collected not just works on traditional computational intelligence approaches like fuzzy logic, neural networks and genetic algorithms but also examples for more recent technologies like e.g. rough sets, support vector machines, wavelets or ant algorithms. After an introductory chapter with a structural description of all the methodologies the subsequent parts describe novel applications of these to typical economics and finance problems like business forecasting.

uncertainties using synthetic information composed of available hard data from historical observations the results of possible experiments and scientific facts as well as soft data from experts opinions and scenarios
