The Oxford Handbook of Austrian Economics Peter J. Boettke, Christopher J. Coyne, 2015-09-01 The Austrian School of Economics is an intellectual tradition in economics and political economy dating back to Carl Menger in the late 19th century Menger stressed the subjective nature of value in the individual decision calculus Individual choices are indeed made on the margin but the evaluations of rank ordering of ends sought in the act of choice are subjective to individual chooser For Menger the economic calculus was about scarce means being deployed to pursue an individual's highest valued ends The act of choice is guided by subjective assessments of the individual and is open ended as the individual is constantly discovering what ends to pursue and learning the most effective way to use the means available to satisfy those ends This school of economic thinking spread outside of Austria to the rest of Europe and the United States in the early 20th century and continued to develop and gain followers establishing itself as a major stream of heterodox economics The Oxford Handbook of Austrian Economics provides an overview of this school and its theories The various contributions discussed in this book all reflect a tension between the Austrian School's orthodox argumentative structure rational choice and invisible hand and its addressing of a heterodox problem situations uncertainty differential knowledge ceaseless change The Austrian economists from the founders to today seek to derive the invisible hand theorem from the rational choice postulate via institutional analysis in a persistent and consistent manner Scholars and students working in the field of History of Economic Thought those following heterodox approaches and those both familiar with the Austrian School or looking to learn more will find much to learn in this comprehensive volume

Understanding Ludwig Lachmann's Economics Virgil Henry Storr, Solomon M. Stein, 2024-02-01 Ludwig Lachmann is a central but underappreciated figure within the Austrian school of economics Although his understanding of institutions his appreciation of the heterogeneity of capital his emphasis on subjectivity and his focus on the dynamism and uncertainty of the real world have become dominant positions amongst Austrian economists he is still viewed as something of an outsider As such the contributions of Lachmann's economics are arguably misunderstood This Element attempts to tease out and discuss the critical contributions of Lachmann's economics Arguably one way in which to understand Lachmann's economics is by seeing it as unified in considering in various ways a single conceptual problem the apparent tension between the dynamic nature of social reality and the intelligible nature of the social world Approaching Lachmann with this theme in mind allows us to put things together more coherently than other exegetical strategies *The Digital Challenge* Shirin Madon, S Krishna, 2018-02-06 This title was first published in 2003 Information and communication technologies ICTs are increasingly being recognized as vital to the economic growth and global inclusion and participation of developing countries This book brings together both academics and practitioners to provide a comprehensive and insightful overview of ICT and development around the world It examines the role of IT in providing new economic and industrial opportunities in increasing access to global information and communication in assisting small cultural and ethnic groups to overcome disadvantages of physical distance and in catalysing initiatives towards democratic decentralization and empowerment of citizens It also critically appraises major problems such as inappropriate focus and resource allocation and of missed

Online Communities and Open Innovation Linus Dahlander, Lars Frederiksen, Francesco Rullani, 2014-07-16 The advent of Internet marked a significant change in how users and customers can be involved in the innovative process History is rife with examples of how users innovate but Internet and its associated communication technologies brought radically new means for individuals to interact rapidly and at little cost in communities that spur new innovations These communities are initiated and governed by people that differ in their motivations for taking part and participate to varying degrees Such communities are outside the immediate control of companies seeking to develop open innovation strategies aimed at harnessing their work This book brings together distinguished scholars from different disciplines economics organization theory innovation studies and marketing in order to provide an improved understanding of how technological as well as symbolic value is created and appropriated at the intersection between online communities and firms Empirical examples are presented from different

industries including software services and manufacturing The book offers food for thought for academics and managers to an important phenomenon that challenges many conventional wisdoms for how business can be done This book was published as a special issue of Industry and Innovation *Markets, Information and Communication* Jack Birner, Pierre

Reading Hyper Productive Knowledge Work Performance has influenced my thinking more than any other recent book I have read about how to transform my company s culture to achieve higher levels of productivity It s like the perfect mix of Fred Brooks W Edwards Deming Donald Reinertsen David Anderson and Jeff Sutherland all rolled into one approachable and pragmatic book I recognized a lot of what I already knew and then was pleasantly surprised with how the authors used hyper productivity to show how it all interconnected All in all it is an eye opening book that provides a concrete path to hyper productivity Curt Hibbs Chief Agile Evangelist Boeing This unique reference shows how to lead knowledge workers manage knowledge work and build a hyper productive knowledge work organization by taming and managing the four flows of

organizational performance psychology information work and finance to produce spectacular operational and financial throughput results Inspired by his experience and knowledge gained at Borland International where a hyper productive level of performance was achieved resulting in the most productive software project ever documented author Steve Tendon devised TameFlow TameFlow is an approach that can be superimposed on any preexisting process method and practice to enable performance improvement by several orders of magnitude and a state of hyper productivity It is adaptable to nearly every industry and can be applied to any knowledge work domain or organization that generates business value through knowledge TameFlow blends and merges different ideas from a variety of schools of thought It is founded in pattern theory and organizational performance patterns which are used to analyze and decompose processes methodologies and management practices into constituent parts to observe productivity patterns and then they are recombined in new configurations to enable hyper productive levels of performance In this volume of The TameFlow Hyper Productivity Series the TameFlow approach is explained within the context of knowledge work performed in a software development organization Mr Tendon teams up with author Wolfram M ller a thought leader and expert in Critical Chain and Advanced Agile Project Management to illustrate its application to Scrum the most widely used Agile software project management framework and to Kanban a method used for knowledge work with an emphasis on just in time delivery and change management The authors demonstrate how constraints management TOC can improve Scrum and Kanban in powerful ways bringing more predictability of behavior of the system as a whole as well as to the individuals involved Their combination becomes a breeding ground for the development of Unity of Purpose and Community of Trust Both Scrum and Kanban can be extended with features of the TOC and help create a hyper productive organization Information Systems Development Chris Barry,Kieran Conboy,Michael Lang,Gregory Wojtkowski,Wita Wojtkowski,2008-12-09 Information Systems Development
