Bulletin de L'Association Internationale de la Science Du Sol International Society of Soil Science,1998 **Precision in Crop Farming** Hermann J. Heege,2013-07-03 High yields and environmental control in crop farming call for precise adaptations to local growing conditions Treating large fields in a uniform way by high capacity machinery cannot be regarded as a sustainable method for many situations Because differences existing within single fields must be considered The transition from former field work carried out manually or by small implements to present day high capacity machinery caused that the farmers lost the immediate and close contact with soils and crops However modern sensing and controlling technology can make up for this deficit High tech methods that include proximal sensing and signals from satellites can provide for controls that allow adjusting farming operations to small fractions of one ha and sometimes even down to some m² hence in a site specific mode This applies to operations for soil cultivation sowing fertilizing and plant protection This book deals with site specific concepts applications and results
