Watershed Models Qingyun Duan, Hoshin V. Gupta, Soroosh Sorooshian, Alain N. Rousseau, Richard Turcotte, 2003-01-10

Published by the American Geophysical Union as part of the Water Science and Application Series Volume 6 During the past four decades computer based mathematical models of watershed hydrology have been widely used for a variety of applications including hydrologic forecasting hydrologic design and water resources management These models are based on general mathematical descriptions of the watershed processes that transform natural forcing e g rainfall over the landscape into response e g runoff in the rivers The user of a watershed hydrology model must specify the model parameters before the model is able to properly simulate the watershed behavior Hydroinformatics, Proceedings Of The 6th International

Conference (In 2 Volumes, With Cd-rom) Shie-yui Liong, Kok Kwang Phoon, Vladan Babovic, 2004-06-18 Hydroinformatics addresses cross disciplinary issues ranging from technological and sociological to more general environmental concerns including an ethical perspective It covers the application of information technology in the widest sense to problems of the

aquatic environment This two volume publication contains about 250 high quality papers contributed by authors from over 50 countries The proceedings present many exciting new findings in the emerging subjects as well as their applications such as data mining data assimilation artificial neural networks fuzzy logic genetic algorithms and genetic programming chaos theory and support vector machines geographic information systems and virtual imaging decision support and management systems Internet based technologies This book provides an excellent reference to researchers graduate students practitioners and all those interested in the field of hydroinformatics Landscape Dynamics, Soils and Hydrological Processes in Varied

Fast Processes in Large-Scale Atmospheric Models Yangang Liu, Pavlos Kollias, 2023-12-19 Improving weather and climate prediction with better representation of fast processes in atmospheric models Many atmospheric processes that influence Earth s weather and climate occur at spatiotemporal scales that are too small to be resolved in large scale models They must be parameterized which means approximately representing them by variables that can be resolved by model grids Fast Processes in Large

Scale Atmospheric Models Progress Challenges and Opportunities explores ways to better investigate and represent multiple parameterized processes in models and thus improve their ability to make accurate climate and weather predictions Volume highlights include Historical development of the parameterization of fast processes in numerical models Different types of major sub grid processes and their parameterizations Efforts to unify the treatment of individual processes and their interactions Top down versus bottom up approaches across multiple scales Measurement techniques observational studies and frameworks for model evaluation Emerging challenges new opportunities and future research directions The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals
