Design of System on a Chip Ricardo Reis, Jochen A.G. Jess, Jochen Jess, 2004-07-14 Design of System on a Chip is the first of two volumes addressing the design challenges associated with new generations of the semiconductor technology The various chapters are the compilations of tutorials presented at workshops in Brazil in the recent years by prominent authors from all over the world In particular the first book deals with components and circuits Device models have to satisfy the conditions to be computationally economical in addition to be accurate and to scale over various generations of technology In addition the book addresses issues of the parasitic behavior of deep sub micron components such as parameter variations and sub threshold effects Furthermore various authors deal with items like mixed signal components and memories We wind up with an exposition of the technology problems to be solved if our community wants to maintain the pace of the International Technology Roadmap for Semiconductors ITRS

Circuit Design for Wireless Communications Kong-Pang Pun, José Epifanio da Franca, Carlos Azeredo-Leme, 2013-03-09 Circuit Design for Wireless Communications Improved Techniques for Image Rejection in Wideband Quadrature Receivers is the first book focusing on the subject of image rejection in wireless receiver design which has never been so important as high level of integration is highly demanded in the current and next generation mobile

terminals In this book the image rejection problems in various receiver architectures which are suitable for high level of integration including image reject direct conversion and low IF architectures are studied The fundamental source of the limitation of the image rejection in these receivers is the imbalance between their in phase I and quadrature Q channels which becomes more problematic when the receivers are of wideband Besides traditional methods this book provides novel solutions to the problem which falls into two broad types The first type refers to new circuits that produce less I Q imbalance This includes high performance switched capacitor Hilbert transformers and precise quadrature sampling circuits The second type is to compensate the I Q imbalance which is possibly frequency dependent in digital domain by calibration or signal processing techniques Design examples have been included Circuit Design for Wireless Communications Improved Techniques for Image Rejection in Wideband Quadrature Receivers serves as a very useful reference for wireless design engineers who want to improve the image rejection of their wireless receivers and researchers and students who are interested in this subject
