Millimetre and Submillimetre Astronomy R.D. Wolstencroft,W.B. Burton,2012-12-06 The millimetre and submillimetre spectral region 300 to 3000 Ilm or 1000 to 100 GHz was until recently one of the few spectral regimes not fully opened up for astronomical studies Thanks both to improvements in detectors and receivers and to the construction of large telescopes at high altitude sites this situation is improving very rapidly Three major telescopes have been built recently and are coming into operation during 1987 and 1988 namely the 15m James Clerk Maxwell Telescope JCMT and the IOAm Caltech Submillimetre Observatory CSO telescope both located on Mauna Kea Hawaii and the 15 m Swedish ESO telescope SEST in Chile Because a very wide range of astronomical problems can be tackled with these major new facilities there is a great deal of interest from the many potential new users anxious to become familiar with this rapidly developing field During 1986 it became clear to British and Dutch astronomers involved in planning the commissioning and operation of the JCMT that a summer school in this field would greatly benefit the potential and actual JCMT user community With financial support from the SERC and supplemented by a grant from the ZWO the Summer School on Millimetre and Submillimetre Astronomy
