*Solitons and Chaos* Ioannis Antoniou, Franklin J. Lambert, 2012-12-06 Solitons and Chaos is a response to the growing interest in systems exhibiting these two complementary manifestations of nonlinearity The papers cover a wide range of topics but share common mathematical notions and investigation techniques An introductory note on eight concepts of integrability has been added as a guide for the uninitiated reader Both specialists and graduate students will find this update on the state of the art useful Key points chaos vs integrability solitons theory and applications dissipative systems Hamiltonian systems maps and cascades direct vs inverse methods higher dimensions Lie groups Painlevé analysis numerical algorithms perturbation methods

*Solitons and Chaos* Ioannis Antoniou, 1991 [The Painlevé Property](#) Robert Conte, 2012-12-06 The subject this volume is explicit integration that is the analytical as opposed to the numerical solution of all kinds of nonlinear differential equations ordinary differential partial differential finite difference Such equations describe many physical phenomena their analytic solutions particular solutions first integral and so forth are in many cases preferable to numerical computation which may be long costly and worst subject to numerical errors In addition the analytic approach can provide a global knowledge of the solution while the numerical approach is always local Explicit integration is based on the powerful methods based on an in depth study of singularities that were first used by Poincaré and subsequently developed by Painlevé in his famous Leçons de Stockholm of 1895 The recent interest in the subject and in the equations investigated by Painlevé dates back about thirty years ago arising from three apparently disjoint fields the Ising model of statistical physics and field theory propagation of solitons and dynamical systems The chapters in this volume based on courses given at Cargèse 1998 alternate mathematics and physics they are intended to bring researchers entering the field to the level of present research

*Chaotic Dynamics* T. Bountis, 2012-12-06 Many conferences meetings workshops summer schools and symposia on nonlinear dynamical systems are being organized these days dealing with a great variety of topics and themes classical and quantum theoretical and experimental Some focus on integrability or discuss the mathematical foundations of chaos Others explore the beauty of fractals or examine endless possibilities of applications to problems of physics chemistry biology and other sciences A new scientific discipline has thus emerged with its own distinct philosophical viewpoint and an impressive arsenal of new methods and techniques which may be called Chaotic Dynamics Perhaps its most outstanding achievement so far has been to shed new light on many long standing issues involving complicated irregular or chaotic nonlinear phenomena The concepts of randomness complexity and unpredictability have been critically re examined and the fundamental importance of scaling self similarity and sensitive dependence on parameters and initial conditions has been firmly established In this NATO ASI held at the seaside Greek city of Patras between July 11 20 1991 a serious effort was made to bring together scientists representing many of the different aspects of Chaotic Dynamics Our main aim was to

review recent advances evaluate the current state of the art and identify some of the more promising directions for research in Chaotic Dynamics

Applications of Analytic and Geometric Methods to Nonlinear Differential Equations P.A. Clarkson, 1993-09-30 In the study of integrable systems two different approaches in particular have attracted considerable attention during the past twenty years 1 The inverse scattering transform IST using complex function theory which has been employed to solve many physically significant equations the soliton equations 2 Twistor theory using differential geometry which has been used to solve the self dual Yang Mills SDYM equations a four dimensional system having important applications in mathematical physics Both soliton and the SDYM equations have rich algebraic structures which have been extensively studied Recently it has been conjectured that in some sense all soliton equations arise as special cases of the SDYM equations subsequently many have been discovered as either exact or asymptotic reductions of the SDYM equations Consequently what seems to be emerging is that a natural physically significant system such as the SDYM equations provides the basis for a unifying framework underlying this class of integrable systems i e soliton systems This book contains several articles on the reduction of the SDYM equations to soliton equations and the relationship between the IST and twistor methods The majority of nonlinear evolution equations are nonintegrable and so asymptotic numerical perturbation and reduction techniques are often used to study such equations This book also contains articles on perturbed soliton equations Painlevé analysis of partial differential equations studies of the Painlevé equations and symmetry reductions of nonlinear partial differential equations

*Electron-Electron Correlation Effects in Low-Dimensional Conductors and Superconductors* Alexandr A. Ovchinnikov,Ivan I. Ukrainskii,2012-12-06 Advances in the physics and chemistry of low dimensional systems have been really magnificent in the last few decades Hundreds of quasi one dimensional and quasi two dimensional systems have been synthesized and studied The most popular representatives of quasi one dimensional materials are polyacetylenes CH<sub>1</sub> and conducting donor acceptor molecular crystals TIF z TCNQ Examples of quasi two dimensional systems are high temperature superconductors HTSC based on copper oxides LA2CU04 YBa2Cu3O6 y and organic superconductors based on BEDT TIP molecules The properties of such one and two dimensional

materials are not yet fully understood On the one hand the equations of motion of one dimensional systems are rather simple which facilitates rigorous solutions of model problems On the other hand manifestations of various interactions in one dimensional systems are rather peculiar This refers in particular to electron electron and electron phonon interactions Even within the limit of a weak coupling constant electron electron correlations produce an energy gap in the spectrum of one dimensional metals implying a Mott transition from metal to semiconductor state In all these cases perturbation theory is inapplicable Which is one of the main difficulties on the way towards a comprehensive theory of quasi one dimensional systems This meeting held at the Institute for Theoretical Physics in Kiev May 15 18 1990 was devoted to related problems The papers selected for this volume are grouped into three sections     Signal Transduction in Photoreceptor Cells Paul A. Hargrave, Klaus P. Hofmann, U. Benjamin Kaupp, 2013-04-09 This book deals with the mechanism of signal transduction in vertebrate and invertebrate photoreceptors It contains contributions on the structure and function of rhodopsin or other G coupled receptors on the regulation of second messengers by enzyme cascade the role of  $Ca^{2+}$  in light adaptation control of ionic channels in photoreceptor cells     **High-Tc Superconductivity** Aleksandr S. Davydov, Vadim M. Loktev, 2012-12-06 High Tc Superconductivity is based on a meeting held in Kiev and contains contributions discussing the most recent achievements in this field The book includes reviews and original papers covering theoretical and experimental aspects of the subject Keywords electronic and magnetic properties metallization processes emission and optic spectra levitation pinning frustration and fluctuations thin films     **INIS Atomindex** ,1987     **Nuclear Data for Science and Technology** Syed M. Qaim, 2012-12-06 This book describes the Proceedings of the International Conference on Nuclear Data for Science and Technology held at Jilich in May 1991 The conference was in a series of application oriented nuclear data conferences organized in the past under the auspices of the Nuclear Energy Agency Nuclear Data Committee NEANDC and with the support of the Nuclear Energy Agency Committee on Reactor Physics NEACRP It was the first international conference on nuclear data held in Germany with the scientific responsibility entrusted to the Institute of Nuclear Chemistry of the Research Centre Jilich The scientific programme was established by the International Programme Committee in consultation with the International Advisers and the NEA and IAEA cooperated in the organization A total of 328 persons from 37 countries and five international organizations participated The scope of these Proceedings extends to a wide range of interdisciplinary topics dealing with measurement calculation evaluation and application of nuclear data with a major emphasis on numerical data Both energy and non energy related applications are considered and due attention is given to some fundamental aspects relevant to the understanding of nuclear data
