It was about five years ago walking around my local park on a beautiful Saturday morning when I suddenly realized something was dreadfully wrong On the soccer fields kids from a local club were waiting in lines to dribble a ball around a set of cones On another field players from a nearby high school football team were waiting in line to run through a set of tires On the baseball diamond batters were hitting balls off tees On the tennis court the instructor was tossing the ball underhand to a player attempting to repeat the same forehand stroke over and over into an empty court Soccer football baseball and tennis are incredibly exciting dynamic activities defined by their interpersonal actions attacker vs defender pitcher vs hitter server vs receiver It seems like almost every week we see a highlight of an athlete from one of these sports doing something new and unexpected So why then do we practice them in such a static isolated and choreographed manner If an alien from another planet came and watched would they think the goal of sports here on earth was to defeat inanimate pieces of rubber Why do we insist on teaching movement skills this way From golf lessons to soccer practice to learning to do pottery the dominant view has been that we become skillful by trying to repeat the one correct technique given to us by a coach or an instructor over and over until we get it right In baseball tennis and golf we learn THE way to swing In soccer and basketball we learn THE correct way to dribble a ball In pottery we learn THE way to position our hands We reduce these creative interactive dynamic activities down to dull isolated fundamentals so that they can be drilled and mastered For a long time we have assumed that decomposition and repetition rule the day if you want to be an elite performer In this book I want to introduce you to a revolution in the way we think about learning to move and act in the world A radical change

Motor Learning and Development 2nd Edition Haibach, Pamela, Reid, Greg, Collier,

Douglas, 2018 Motor Learning and Development Second Edition With Web Resource provides a foundation for understanding how humans acquire and continue to hone their movement skills throughout the life span Elementary Physical Education Rovegno, Dianna Bandhauer, 2016-02-15 Includes an access code for online materials *Educational Gymnastics for Children* Tina J. Hall, Shirley Holt/Hale, 2023-08-02 Educational gymnastics is a field that differs from traditional gymnastics. Instead of a focus on developing skills in which all students are expected to develop at the same rate, educational gymnastics provides learning experiences that are designed to meet children at their skill level and expand skills within their level of competence. Educational gymnastics centers on balance as a lifelong skill, on self responsibility, and on respect for self and others. Educational Gymnastics for Children takes a child centered approach to offering highly applied and safe learning experiences as it provides readers with the theoretical foundation and practical application of educational gymnastics for all elementary students. Written by two physical education professionals who have years of experience providing these learning experiences to children in elementary physical education programs, the text offers the following: Gymnastics learning experiences for elementary physical education most requiring no gymnastics equipment; Detailed safety measures for all learning experiences to ensure a safe environment; Assessment strategies to enhance student learning; A child centered approach to engage all students in a noncompetitive environment that encourages variety in student response and success for all students, thus fostering social emotional learning and self worth; The learning experiences in the text provide a clear understanding of the skills and concepts being taught and come with an easy to follow template for teachers; Many of the learning experiences require no equipment; Mats are added for safety as the task difficulty increases; A single chapter has been devoted to use of equipment e.g. boxes, ladders, horizontal bars, climbing frames; Learning Experiences: The learning experiences in the text are presented as a progression based on the development of children both physically and cognitively. Each series of learning experiences is preceded by a cognitive focus, a skill focus, criteria for quality, and information on safety equipment and organization to maximize participation and learning. Teaching tips are offered throughout to help teachers develop lesson plans to fit the needs of their students. Organization: Educational Gymnastics for Children is organized into three parts. Part I presents the theoretical background for educational gymnastics, comparing it to traditional gymnastics. This part explains how educational gymnastics meets children at their skill level and expands their skills within their level of competence. The components of balance are explored, and these chapters explain how to create a learning environment that is student centered, success oriented, and safe. Part II presents learning experiences that will help children develop a functional understanding of the components of educational gymnastics. This part explores the skills of balance, weight transfer, and travel. It offers individual and partner sequences both with and without equipment. Part III addresses two vital questions for teachers: What is your goal for the children you teach? How do you know they have accomplished that goal? Standards and assessments are examined in this part. Lifelong Skills: Educational Gymnastics for Children provides teachers with the content
