## **Skull Of Australopithecus Afarensis:**

*The Skull of Australopithecus Afarensis* William H. Kimbel, Yoel Rak, Donald C. Johanson, 2004 The book is the most in depth account of the fossil skull anatomy and evolutionary significance of the 3.6 million year old early human species *Australopithecus afarensis* Knowledge of this species is pivotal to understanding early human evolution because 1 the sample of fossil remains of *A. afarensis* is among the most extensive for any early human species and the majority of remains are of taxonomically informative skulls and teeth 2 the wealth of material makes *A. afarensis* an indispensable point of reference for the interpretation of other fossil discoveries 3 the species occupies a time period that is the focus of current research to determine when where and why the human lineage first diversified into separate contemporaneous lines of descent Upon publication of this book this species will be among the most thoroughly documented extinct ancestors of humankind The main focus of the book its organizing principle is the first complete skull of *A. afarensis* specimen number A.L. 444-2 at the Hadar site Ethiopia the home of the remarkably complete 3.18 million year old skeleton known as Lucy found at Hadar by third author D. Johanson in 1974 Lucy and other fossils from Hadar together with those from the site of Laetoli in Tanzania were controversially attributed to the then brand new species *A. afarensis* by Johanson T. White and Y. Coppens in 1978 However a complete skull which would have quickly resolved much of the early debate over the species proved elusive until second author Y. Rak's discovery of the 444 skull in 1992 The book details the comparative anatomy of the new skull and the cast of its brain analyzed by R. Holloway and M. Huan as well as of other skull and dental finds recovered during the latest ongoing field work at Hadar and analyzes the evolutionary significance of *A. afarensis* in the context of other critically important discoveries of earliest humans made in recent years In essence it summarizes the state of knowledge about one of the central subjects of current paleoanthropological investigation

**The Human Career** Richard G. Klein, 2004-05-31 Since its publication in 1989 *The Human Career* has proved to be an indispensable tool in teaching human origins This substantially revised third edition retains Richard G. Klein's innovative approach while showing how cumulative discoveries and analyses over the past ten years have significantly refined our knowledge of human evolution Klein chronicles the evolution of people from the earliest primates through the emergence of fully modern humans within the past 200,000 years His comprehensive treatment stresses recent advances in knowledge including for example ever more abundant evidence that fully modern humans originated in Africa and spread from there replacing the Neanderthals in Europe and equally archaic people in Asia With its coverage of both the fossil record and the archaeological record over the 2.5 million years for which both are available *The Human Career* demonstrates that human morphology and behavior evolved together Throughout the book Klein presents evidence for alternative points of view but does not hesitate to make his own position clear In addition to outlining the broad pattern of human evolution *The Human Career* details the kinds of data that support it For the third edition Klein has added numerous tables and a fresh citation system designed to enhance readability

especially for students He has also included more than fifty new illustrations to help lay readers grasp the fossils artifacts and other discoveries on which specialists rely With abundant references and hundreds of images charts and diagrams this new edition is unparalleled in its usefulness for teaching human evolution *Biology Coloring Workbook* I. Edward Alcamo,1998 Following in the successful footsteps of the *Anatomy and the Physiology Coloring Workbook* The Princeton Review introduces two new coloring workbooks to the line Each book features 125 plates of computer generated state of the art precise original artwork perfect for students enrolled in allied health and nursing courses psychology and neuroscience and elementary biology and anthropology courses Evolution of Nervous Systems Georg F. Striedter,Theodore H. Bullock,Todd M. Preuss,John Rubenstein,Leah A. Krubitzer,2016-11-23 *Evolution of Nervous Systems* Second Edition Four Volume Set is a unique major reference which offers the gold standard for those interested both in evolution and nervous systems All biology only makes sense when seen in the light of evolution and this is especially true for the nervous system All animals have nervous systems that mediate their behaviors many of them species specific yet these nervous systems all evolved from the simple nervous system of a common ancestor To understand these nervous systems we need to know how they vary and how this variation emerged in evolution In the first edition of this important reference work over 100 distinguished neuroscientists assembled the current state of the art knowledge on how nervous systems have evolved throughout the animal kingdom This second edition remains rich in detail and broad in scope outlining the changes in brain and nervous system organization that occurred from the first invertebrates and vertebrates to present day fishes reptiles birds mammals and especially primates including humans The book also includes wholly new content fully updating the chapters in the previous edition and offering brand new content on current developments in the field Each of the volumes has been carefully restructured to offer expanded coverage of non mammalian taxa mammals primates and the human nervous system The basic principles of brain evolution are discussed as are mechanisms of change The reader can select from chapters on highly specific topics or those that provide an overview of current thinking and approaches making this an indispensable work for students and researchers alike Presents a broad range of topics ranging from genetic control of development in invertebrates to human cognition offering a one stop resource for the evolution of nervous systems throughout the animal kingdom Incorporates the expertise of over 100 outstanding investigators who provide their conclusions in the context of the latest experimental results Presents areas of disagreement and consensus views that provide a holistic view of the subjects under discussion A Companion to Paleoanthropology David R. Begun,2012-12-20 *A Companion to Paleoanthropology* presents a compendium of readings from leading scholars in the field that define our current knowledge of the major discoveries and developments in human origins and human evolution tracing the fossil record from primate and hominid origins to the dispersal of modern humans across the globe Represents an accessible state of the art summary of the entire field of paleoanthropology with an overview of hominid taxonomy Features articles on the key
