The Slumbering Masses Matthew J. Wolf-Meyer, 2012-09-10 Americans spend billions of dollars every year on drugs therapy and other remedies trying to get a good night's sleep Anxieties about not getting enough sleep and the impact of sleeplessness on productivity health and happiness pervade medical opinion the workplace and popular culture In *The Slumbering Masses* Matthew J Wolf Meyer addresses the phenomenon of sleep and sleeplessness in the United States tracing the influence of medicine and industrial capitalism on the sleeping habits of Americans from the nineteenth century to the present Before the introduction of factory shift work Americans enjoyed a

range of sleeping practices most commonly two nightly periods of rest supplemented by daytime naps The new sleeping regimen eight uninterrupted hours of sleep at night led to the pathologization of other ways of sleeping Arguing that the current model of sleep is rooted not in biology but in industrial capitalism's relentless need for productivity The Slumbering Masses examines so called Z drugs that promote sleep the use of both legal and illicit stimulants to combat sleepiness and the contemporary politics of time Wolf Meyer concludes by exploring the extremes of sleep from cases of perpetual sleeplessness and the use of the sleepwalking defense in criminal courts to military experiments with ultra short periods of sleep Drawing on untapped archival sources and long term ethnographic research with people who both experience and treat sleep abnormalities Wolf Meyer analyzes and sharply critiques how sleep and its supposed disorders are understood and treated By recognizing the variety and limits of sleep he contends we can establish more flexible expectations about sleep and ultimately subvert the damage of sleep pathology and industrial control on our lives

the trusted advice that has been passed down through generations needs to be carefully reexamined In this ground breaking book anthropologist Meredith Small reveals her remarkable findings in the new science of ethnopediatrics Professor Small joins pediatricians child development researchers and anthropologists across the country who are studying to what extent the way we parent our infants is based on biological needs and to what extent it is based on culture and how sometimes what is culturally dictated may not be what s best for babies Should an infant be encouraged to sleep alone Is breast feeding better than bottle feeding or is that just a myth of the nineties How much time should pass before a mother picks up her crying infant And how important is it really to a baby s development to talk and sing to him or her These are but a few of the important questions Small addresses and the answers not only are surprising but may even change the way we raise our children

Evolution, Early Experience and Human Development Darcia Narváez, 2012-11-29 The field of cognitive psychology has expanded rapidly in recent years with experts in affective and cognitive neuroscience revealing more about mammalian brain function than ever before In contrast psychological problems such as ADHD autism anxiety and depression are on the rise as are medical conditions such as diabetes obesity and autoimmune disorders Why in this era of unprecedented scientific self knowledge does there seem to be so much uncertainty about what human beings need for optimal development Evolution Early Experience and Human Development asserts that human development is being misshaped by government policies social practices and public beliefs that fail to consider basic human needs In this pioneering volume scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage For example healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care These include

practices such as breastfeeding co sleeping and parental social support which have waned in modern society but nevertheless may be integral to healthy development As the authors argue without a more informed appreciation of the ideal conditions under which human brains minds develop and function human beings will continue to struggle with suboptimal mental and physical health and as problems emerge psychological treatments alone will not be effective The best approach is to recognize these needs at the outset so as to optimize child development Evolution Early Experience and Human Development puts forth a logical empirically based argument regarding human mammalian needs for optimal development based on research from anthropology neurobiology animal science and human development The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies new attitudes towards health and alterations in childcare practices that will better promote healthy human development **Gender And**
