Paralanguage Fernando Poyatos, 1993-05-06 This is the first interdisciplinary book length treatment of paralanguage briefly defined as nonverbal vocal or paralingual communication. After sensitizing the reader to our sound generating movements and to all human external and environmental sounds for their unquestionable communicative qualities it realistically combines an anatomical physiological auditory approach to voice production identifying many neglected articulations with the analysis of its visual manifestations as the triple reality of speech language paralanguage kinesics. The primary qualities of speech loudness pitch etc are extensively discussed as are the many voice qualities. The longest chapter in the book deals with paralinguistic differentiators laughter crying sighing yawning coughing sneezing etc. Finally the author presents a model for analyzing paralinguistic alternants word like independent constructs such as Pooh Aah and Brrr. Throughout the discussion of these paralinguistic phenomena extensive attention is given to cultural social and psychological aspects. This first ground breaking interdisciplinary work on paralanguage will serve as a source of data and a theoretical methodological model for phoneticians linguists anthropologists sociologists psychologists speech therapists etc.
