Muscle Strength Shrawan Kumar, 2004-04-27 Muscle strength is an important topic for ergonomics practitioners and physiologists to understand especially as it relates to workplace injuries Muscle strength and function is at the heart of many injuries that lead to reduced productivity and economic strain on the worker the company and society as a whole This comprehensive source o

Nanofibers Tong Lin, 2011-11-14 As an important one dimensional nanomaterial nanofibers have extremely high specific surface area because of their small diameters and nanofiber membranes are highly porous with excellent pore interconnectivity These unique characteristics plus the functionalities from the materials themselves impart nanofibers with a number of novel properties for advanced applications This book is a compilation of contributions made by experts who specialize in nanofibers It provides an up to date coverage of in nanofiber preparation properties and functional applications I am deeply appreciative of all the authors and have no doubt that their contribution will be a useful resource for anyone associated with the discipline of nanofibers

Frontiers in Optical Technology P. K. Choudhury, Onkar N. Singh, 2007 This book maps out the frontiers of optical technology in two major subdisciplines optical materials and optical devices The optical materials and material architectures covered include nanostructured silicon chiral sculptured thin films magnetic photonic crystals and switchable materials for efficient lighting and decorative optics The optical devices addressed include silicon waveguides for integrated circuitry high speed electro optic modulators laser diodes coupled with fibre tip lenses and optical sensors Reading the ten chapters either altogether or piecemeal the reader will receive a virtually up to date review of the state of the art

Solid-state Lasers Thomas O. Hardwell, 2008 A solid state laser use and gain medium that is a solid rather than a liquid such as dye lasers or a gas such as gas lasers Semiconductor based lasers are also in the solid state but are generally considered separately from solid state lasers Generally the active medium of a solid state laser consists of a glass or crystalline host material to which is added a dopant such as neodymium chromium erbium or other ions Many of the common dopants are rare earth elements because the excited states of such ions are not strongly coupled with thermal vibrations of the crystalline lattice phonons and the lasing threshold can be reached at relatively low brightness of pump There are many hundreds of solid state media in which laser action has been achieved but relatively few types are in widespread use Of these probably the most common type is neodymium doped YAG Neodymium doped glass Nd glass and Ytterbium doped glasses and ceramics are used in solid state lasers at extremely high power terawatt scale high energy megajoules multiple beam systems for inertial confinement fusion Titanium doped sapphire is also widely used for its broad tunability This book gathers new research in the field
