Smart Structures And Materials:

Smart Structures and Materials B. Culshaw, 1996 This book introduces the enabling concepts that make up the so called smart structure and presents a number of brief case studies to illustrate the applications of these concepts It examines the domains of the individual technologies and defines the challenges faced by the integrator The book is particularly effective for the potential system user who needs a good technical general background on the subject and is also useful for students and researchers in contributory technologies who want to better understand the context of their work Consultants in civil and structural engineering will also find it of interest Smart Structures and Materials Aurelio L. Araujo, Carlos A. Mota Soares, 2016-12-20 This work was compiled with expanded and reviewed contributions from the 7th ECCOMAS Thematic Conference on Smart Structures and Materials that was held from 3 to 6 June 2015 at Ponta Delgada Azores Portugal The Conference provided a comprehensive forum for discussing the current state of the art in the field as well as generating inspiration for future ideas specifically on a multidisciplinary level The scope of the Conference included topics related to the following areas Fundamentals of smart materials and structures Modeling formulation and characterization of smart actuators sensors and smart material systems Trends and developments in diverse areas such as material science including composite materials intelligent hydrogels interfacial phenomena phase boundaries and boundary layers of phase boundaries control micro and nano systems electronics etc to be considered for smart systems Comparative evaluation of different smart actuators and sensors Analysis of structural concepts and designs in terms of their adaptability to smart technologies Design and development of smart structures and systems Biomimetic phenomena and their inspiration in engineering Fabrication and testing of smart structures and systems Applications of smart materials structures and related technology Smart robots Morphing wings and smart aircrafts Artificial muscles and biomedical applications Smart structures in mechatronics and Energy harvesting Smart Structures and Materials 1999 V.
