Brown, David J. Carney, Edwin J. Morris, Dennis B. Smith, Paul F. Zarrella, 1994-09-01 Computer Aided Software Engineering CASE tools typically support individual users in the automation of a set of tasks within a software development process Such tools have helped organizations in their efforts to develop better software within budget and time constraints However many organizations are failing to take full advantage of CASE technology as they struggle to make coordinated use of collections of tools often obtained at different times from different vendors This book provides an in depth analysis of the CASE tool integration problem and describes practical approaches that can be used with current CASE technology to help your organization take greater advantage of integrated CASE      **Software Engineering Environments, 1995** Malcolm S. Verrall, 1995 Sessions on database issues PCTE process modeling integration and orientation from the proceedings of the April 1995 conference offer recent research in principles models architecture and design in software engineering environments Subjects include CASE Tool integration Indra requirements      *The Software Factory Challenge* Herbert Weber, 1997 The Eureka Software Factory project ESF was set up by a Group of European partners in 1987 Its objective was broadly to improve the large scale software production process by introducing an industrialised approach to have The

Software Factory Challenge social organisational and technical aspects The project was set up under the pan European Eureka programme and it was funded by the partners together with their national governments This book is not a history of the ESF project but rather a presentation of its main ideas and achievements and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains In this movement the facility for the production use and maintenance of large scale computer artefacts the Software Factory is treated in a wide and organic way so as to include concepts such as business value and process improvement with the development of new technologies being driven by these new wide requirements This new approach is in contrast with a narrowly technological one in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported The main body of the book is divided into four Parts Part I gives a short overview of the ESF project and its ideas and goes on to attempt to place the ESF work in the context of industry as a whole with reference to both producers and users of Information Technology systems Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date Kernel 2r This Section provides a highly detailed discussion of both design and implementation issues In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software based systems i e systems which are safer more economical to build more easily changed and more useful than those that have been built up to now Finally a Glossary of Terms and a list of References is given Readers those who have a professional interest in Information Technology
