Software Cost Estimation And Sizing Methods Issues And Guidelines:

Software Cost Estimation and Sizing Methods Shari Lawrence Pfleeger, Felicia Wu, Rosalind Lewis, 2005

Recommends an approach to improving the utility and accuracy of software cost estimates by exposing uncertainty in understanding the project and reducing the risks associated with developing the estimates. The approach focuses on characteristics of the estimation process such as which methods and models are most appropriate for a given situation and the nature of the data used such as software size describing symptoms and warning signs of risk in each factor and risk mitigation strategies.

Arena, 2006 This

report is one of a series from a RAND Project AIR FORCE project The Cost of Future Military Aircraft Historical Cost Estimating Relationships and Cost Reduction Initiatives The purpose of the project is to improve the tools used to estimate the costs of future weapon systems It focuses on how recent technical management and government policy changes affect cost This report focuses on the accuracy of cost estimates For our analysis we used a very specific sample of Selected Acquisition Report SAR data namely only programs that are complete or are nearly so The analysis indicates a systematic bias toward underestimating the costs and substantial uncertainty in estimating the final cost of a weapon system In contrast to the previous literature the cost growth was higher than previously observed We also found few correlations with cost growth but observed that programs with longer duration had greater cost growth and electronics programs tended to have lower cost growth Although there were some differences in the mean cost growth factors among the military departments the differences were not statistically significant While newer programs appear to have lower cost growth this trend appears to be

due to factors other than acquisition policies Budget Estimating Relationships for Depot-level Reparables in the Air Force Flying Hour Program Gregory G. Hildebrandt, 2007 Budget estimating relationships BERs for flying depot level reparable DLRs explain the direct effect of specified variables on obligated funds associated with spare parts that directly support the U S Air Force USAF Flying Hour Program In FY02 net sales of DLRs to Air Force commands hit historic highs To provide the Air Force Cost Analysis Improvement Group with a tool to better understand the commands budgetary submissions we develop several explanatory BERs to understand why flying DLRs are at their particular levels Using longitudinal regression statistical methods we explain the historical net sales of flying DLRs using estimating models that relate net sales to the contemporaneous values of aircraft characteristics operational tempo and time related variables This is but one part of a larger project to develop better estimating methods for use by the acquisition community and to examine the impact of Air Force and DoD policies on weapon system costs The findings will also be of interest to those in the national security community who are involved in analyzing alternative military postures and to members of the aircraft industry s analytical community Impossible Certainty ,2006 This report is one of a series from a RAND Project AIR FORCE project The Cost of Future Military Aircraft Historical Cost Estimating Relationships and Cost Reduction Initiatives **Is Weapon System Cost Growth Increasing?** Obaid Younossi, 2007 In recent decades there have been numerous attempts to rein in the cost growth of U S Department of Defense DoD acquisition programs Cost growth is the ratio of the cost estimate reported in a program s final Selected Acquisition Report SAR and the cost estimate baseline reported in a prior SAR issued at a particular milestone Drawing on prior RAND research new analyses of completed and ongoing weapon system programs and data drawn from SARs this study addresses the following questions What is the cost growth of DoD weapon systems What has been the trend of cost growth over the past three decades To address the magnitude of cost growth it examines cost growth in completed programs to evaluate the cost growth trend over time it provides additional analysis of a selection of ongoing programs This sample of ongoing programs permits a look at growth trends in the more recent past Changes in the mix of system types over time and dollar weighted analysis were also considered because earlier studies have suggested that cost growth varies by program type and the cost of the program The findings suggest that development cost growth over the past three decades has remained high and without any significant improvement *Guidelines and Metrics for Assessing Space System Cost Estimates* Bernard Fox, Kevin Brancato, Brien Alkire, 2008 1 Introduction 2 Space system fundamentals 3 Reviewing a cost estimate 4 Space vehicle cost crosschecks 5 Common issues in estimating space programs 6 Resources for space system cost estimation 7 Recommendations *Evolutionary Acquisition* Mark A. Lorell, Julia Lowell, Obaid Younossi, 2006 So far EA implementation of military space programs has produced mixed results The capabilities and requirements definition and management processes are major challenges in all EA programs EA programs require an evolutionary costing approach most cost analysts interviewed expressed generally positive views about EA BOOK JACKET
