Soil Improvement Techniques And Their Evolution:

Soil Improvement Techniques and Their Evolution Willem van Impe, 2020 **Soil Improvement Techniques and Their Evolution**, 1989 Ground Improvement Techniques Bujang B.K. Huat, Arun Prasad, Sina Kazemian, Vivi Anggraini, 2019-11-06 This book provides a review of problems during design and construction on problematic soils. Design methods, site investigation, construction and analysis of the various improvement methods available are explained and discussed. Various regions may have different soils with geotechnical problems that differ from those faced in other regions. For example, in Southeast Asia the common geotechnical problems are those associated with construction on soft clays and organic soils, while in the arid region of the Middle East problems are generally associated with the desert soils. In the US the problems are associated with organic soils, expansive and collapsing soils, and shale. Laterite and lateritic soils are especially problematic in Mexico. Similarly, in Europe, for example, the geotechnical problems are associated with loess. France and Germany have organic soil. A detailed description of various methods of ground improvement has been provided in 11 chapters. Each chapter deals not only with a description of the method but also focuses on region specific ground problems and suitable ground improvement techniques. Case studies have also been included. One general chapter is dedicated to site investigation, instrumentation, assessment and control. This book will be of value to students and professionals in the fields of civil and geotechnical engineering as well as to soil scientists and engineering geologists. Engineering Treatment of Soils Fred Bell, 2002-11-01 This book reviews the techniques used to improve the engineering behaviour of soils either in situ or when they are used as a construction material. It is a straightforward, well illustrated and readable account of the techniques and includes numerous up to date references. **Ground Improvement Case Histories** Buddhima Indraratna, Jian Chu, Chalachat Rujikiatkamjorn, 2015-05-28 Written by an international group of experts, *Ground Improvement Case Histories: Chemical, Electrokinetic, Thermal and Bioengineering Methods* provides over 700 pages of case histories collected from all over the world. Each case history provides an overview of the specific technology followed by applications and, in some cases, comprehensive back analysis. Numerical modelling is discussed. The book includes methods for employing bacterial and biological treatment and native vegetation for stabilizing problematic soils. Specific case histories included in the book are: Effect of Drainage and Grouting for the World's Longest Seikan Undersea Tunnel Construction; Cement-lime Mixing Ground Improvement for Road Construction on Soft Ground; Use of Jet Grouting in Deep Excavations; and Stabilization of Reactive Sulphide Mine Tailings using Water Cover Technology. Provides recent case histories using chemical and bioengineering methods by world renowned engineering experts. Includes over 200 illustrations and 150 equations from relevant topics including state of the art chemical and bioengineering methods. Presents comprehensive analysis methods using numerical modelling methods. Case histories include the Effect of Drainage and Grouting on the World's Longest Seikan Undersea Tunnel Construction and Cement Lime Mixing Ground Improvement for Road Construction on Soft Ground.
