and Simulation of Heterostructure Devices Vassil Palankovski, Rüdiger Quay, 2012-12-06 Communication and information systems are subject to rapid and highly sophisticated changes. Currently semiconductor heterostructure devices such as Heterojunction Bipolar Transistors (HBTs) and High Electron Mobility Transistors (HEMTs) are among the fastest and most advanced high frequency devices. They satisfy the requirements for low power consumption, medium integration, low cost in large quantities and high speed operation capabilities in circuits. In the very high frequency range, cut off frequencies up to 500 GHz have been reported on the device level. HEMTs and HBTs are very suitable for high efficiency power amplifiers at 900 MHz as well as for data rates higher than 100 Gbit/s for long range communication and thus cover a broad range of applications. To cope with explosive development costs and the competition of today's semiconductor industry, Technology Computer Aided Design (TCAD) methodologies are used extensively in development and production. As of 2003, III-V semiconductor HEMT and HBT micrometer and millimeter wave integrated circuits (MICs) and MMICs are available on six inch GaAs wafers. SiGe HBT circuits as part of the CMOS technology on eight inch wafers are in volume production. Simulation tools for technology devices and circuits reduce expensive technological efforts. This book focuses on the application of simulation software to heterostructure devices with respect to industrial applications. In particular, a detailed discussion of physical modeling for a great variety of materials is presented. **Advanced Sensor and Detection**

Materials Ashutosh Tiwari, Mustafa M. Demir, 2014-06-09 Presents a comprehensive and interdisciplinary review of the major cutting edge technology research areas, especially those on new materials and methods as well as advanced structures and properties for various sensor and detection devices. The development of sensors and detectors at macroscopic or nanometric scale is the driving force stimulating research in sensing materials and technology for accurate detection in solid, liquid or gas phases, contact or non contact configurations or multiple sensing. The emphasis on reduced scale detection techniques requires the use of new materials and methods. These techniques offer appealing perspectives given by spin crossover, organic, inorganic and composite materials that could be unique for sensor fabrication. The influence of the length, composition and conformation structure of materials on their properties and the possibility of adjusting sensing properties by doping or adding the side groups are indicative of the starting point of multifarious sensing. The role of intermolecular interactions, polymer and ordered phase formation as well as behavior under pressure and magnetic and electric fields are also important facts for processing ultra sensing materials. The 15 chapters written by senior researchers in Advanced Sensor and Detection Materials cover all these subjects and key features under three foci: 1) principals and perspectives, 2) new materials and methods, and 3) advanced structures and properties for various sensor devices. *Accessions of Unlimited Distribution Reports*, 1974-06-21 *The Publishers' Trade List Annual*, 1979 *Physical Research Program* United States. Energy Vincent Dusastre, 2011 The search for cleaner cheaper smaller and more efficient energy technologies has to a large extent been motivated by the development of new materials The aim of this collection of articles is therefore to focus on what materials based solutions can offer and show how the rationale design and improvement of their physical and chemical properties can lead to energy production alternatives that have the potential to compete with existing technologies In terms of alternative means to generate electricity that utilize renewable energy sources the most dramatic breakthroughs for both mobile i e transportation and stationary applications are taking place in the fields of solar and fuel cells And from an energy storage perspective exciting developments can be seen emerging from the fields of rechargeable batteries and hydrogen storage
