Solidification and Cast Structure I. Minkoff, 1986-08-11 This practical guide presents a comprehensive account of solidification processes in metals and alloys and describes the manner in which cast structure arises. Reviews the principle features of solidification theory in an accessible and easily understood manner. Relates the solidification and cast structure process to different industrial processes such as conventional casting, continuous casting, welding and rapid solidification. Provides concise descriptions of structure formation in cast steel, cast iron and aluminum. Includes treatment of cast ceramics, glass, metal nonmetal structures, rapid solidification, welding and continuous casting processes.

Metallography of Steels: Interpretation of Structure and the Effects of Processing Hubertus Colpaert, 2018-08-01 Updated and translated by Andr Luiz V da Costa e Silva. This book is a combination of a metallographic atlas for steels and cast irons and an introductory textbook covering the fundamentals of phase transformations and heat treatment of these materials. Every important stage of processing from casting to cold working is clearly discussed and copiously illustrated with metallographs that show the obtained structures both desired and those achieved when deviations occur. First published in 1951 by Professor Hubertus Colpaert from the Institute for Technological Research IPT of S o Paulo, Brazil, this book became one of the most important Brazilian references for professionals interested in the processing, treatment and application of steels and cast irons. In the Fourth Edition and English translation updated and translated by Professor Andr Luiz V da Costa e Silva, the concept of the original edition was preserved while the important developments of recent decades both in metallographic characterization and in steel and iron products as well as progress in the understanding of the transformations that made the extraordinary developments of these alloys possible were added. Most metallographs are of actual industrial materials and a large number originate from industry leaders or laboratories at the forefront of steel and iron development. As steel continues to be the most widely used metallic material in the world, Metallography of Steels continues to be an essential reference for students, metallographers and engineers interested in understanding processing, properties, structure relationships of the material. The balance between theoretical and applied information makes this book a valuable companion for even experienced steel practitioners.

Casting Processes and Modelling of Metallic Materials Zak Abdallah, Nada Aldoumani, 2021-02-24 This book, Casting Processes and Modelling of Metallic Materials, explores the various casting and modelling activities related to metallic alloy systems. The book provides results of research work conducted by experts from all over the globe to add to the research community in the era of the casting process and modelling. The book was edited by two experts in the field of materials.

science and modelling Dr Abdallah and Dr Aldoumani whom both have several publications in peer reviewed journals worldwide conferences and scientific books The book introduces the casting processes and then discusses the various issues and possible solutions Over the past years various models have been proposed and utilized to predict the performance of castings Some of these models proved to be accurate whereas others failed to predict the casting performance The strength of any predictive tool depends on the employment of physically meaningful parameters that replicate the real life conditions This has been illustrated in the current book with such predictive models and finite element FE modelling to illustrate the behaviour of castings in real life conditions CFD Modeling and Simulation in Materials Processing 2016 Laurentiu Nastac,Miaoyong Zhu,Adrian Sabau,2017-08-31 Interpretation of Metallographic Structures James Dvorak,2012-12-02 Interpretation of Metallographic Structures Second Edition describes the features of metallographic structures using an optical reflection microscope This book is divided into six chapters and starts with an examination of the polycrystalline structures subgrain boundaries and an overview of cold and hot working as well as recrystallization and grain growth The next chapter explores the metallography of fracture which involves visual inspection low power stereoptic light microscopy polished section light reflection microscopy and the scanning electron microscope This topic is followed by discussions of the different types of crystallizations the mechanism of solid state transformation and the diffusion and other transport processes The last chapter involves the measurement aspects in metallography including measurement of grain and particles sizes as well as their distribution This book is intended primarily to metallurgists and researchers *Interpretation of Metallographic Structures* William Rostoker,James R. Dvorak,2012-12-02 Interpretation of Metallographic Structures Third Edition is concerned with metallography as a metallurgical tool It is an organized presentation of specimen microstructures each chosen for its clarity of illustration and each or in groups forming the pretext for discussions of the interrelation between physical metallurgy and metallography The focus is on structures characteristic in a physical metallurgy sense with the purpose of demonstrating that logical framework of interpretation can supplant mental storage of infinite variations The book contains seven chapters and begins with a discussion of polycrystalline structures This is followed by separate chapters on the metallography of fracture crystallization processes including dendritic crystallization peritectic crystallization and metastable crystallization solid state transformations diffusion and transport processes procedures for measuring metallographic features and energy dispersive spectography This book is directed toward the senior student as a preview of the scope of his subject and to the practicing metallurgist as a reintroduction *Characterization of Minerals, Metals, and Materials 2021* Jian Li,Mingming Zhang,Bowen Li,Sergio Neves Monteiro,Shadia Ikhmayies,Yunus Eren Kalay, Jiann-Yang Hwang,Juan P.
