Surfactants Bob Aveyard,2019-10-09

Surfactants today you have probably eaten some or rubbed others on your body Plants animals including you and microorganisms make them and many everyday products e g detergents cosmetics foodstuffs contain them Surfactant molecules have one part which is soluble in water and another which is not This gives surfactant molecules two valuable properties 1 they adsorb at surfaces e g of an oil droplet in water and 2 they stick together aggregate in water The aggregates micelles are able to dissolve materials not soluble in water alone and adsorbed surfactant layers at the surfaces of particles or say oil droplets in water stop the particles or drops sticking together This is why stable emulsions such as milk do not separate into layers This book treats the basic physical chemistry and physics underlying the behaviour of surfactant systems In this book you will first learn about some background material including hydrophobic hydration interfacial tension and capillarity Section I Discussion of surfactant adsorption at liquid fluid and solid liquid interfaces is given in Section II and includes thermodynamics of adsorption dynamic and rheological aspects of liquid interfaces and the direct characterisation of surfactant monolayers In Section III a description is given of surfactant aggregation to give micelles lyotropic liquid crystals microemulsions and Winsor systems There follows a discussion of surface forces and the way they confer stability on lyophobic colloids and thin liquid films Section IV Various dispersions stabilised by adsorbed surfactant or polymer including solid in liquid dispersions emulsions and foams are considered in Section V The wetting of solids and liquids is explored in Section VI Like surfactants small solid particles can adsorb at liquid fluid interfaces form monolayers and stabilise emulsions and foams Such behaviour is covered in Section VII It is assumed the reader has a knowledge of undergraduate physical chemistry particularly chemical thermodynamics and of simple physics Mathematics elementary algebra and calculus is kept at a level consistent with the straightforward derivation of many of the equations presented

Surfactant Formulation Engineering using HLD and NAC Edgar Acosta,Jeffrey Harwell,David A. Sabatini,2025-04-28

Surfactants are molecules that contain groups that are water loving hydrophilic and oil loving lipophilic The central question in formulations is often which of the two portions dominate the behavior of the surfactant For many years that question was answered in terms of the surfactant structure only However the modern view is that the hydrophilic lipophilic nature of the surfactant is the result of surfactant structure and formulation conditions nature of the oil temperature aqueous phase composition as captured by a semi empirical equation called the hydrophilic lipophilic difference HLD The HLD is a dimensionless number that indicate the approach to the point where the surfactant inverts its solubility from being water soluble negative HLD to oil soluble positive HLD The HLD alone is a good indicator of how the formulation could behave but it does not produce any formulation property that can be used to predict product performance The net average curvature NAC are a set of equations that take the

value of HLD to predict the properties of the formulation such as oil and or water solubilization capacity interfacial tension phase diagrams contact angle and others Surfactant Formulation Engineering using HLD and NAC will not only introduce the reader to HLD NAC but also to the practical use of these concepts in numerous applications ranging from application in the petroleum industry to environmental remediation to food cosmetic and pharmaceutical applications and even nanotechnology The last part of the book will look at the molecular origins of the empirical terms in HLD via the Integrated Free Energy Model IFEM Concentrates on the HLD and NAC providing industrially relevant examples Provides the only single depository for HLD parameters Balances theory and application with insights from both academic and industrial authors Includes examples relevant to a wide range of fields with practical guides on how to go from the formulation objective s to an actual formulation design

Shah,2013-03-08 This volume chronicles the proceedings of the 8th International Symposium on Surfactants in Solution SIS held in Gainesville FL June 10 15 1990 This series of symposia have been smoothly running since 1976 but the appellation Surfactants in Solution was used for the first time in 1982 in Lund Since then our logo SIS has become very familiar to everyone involved in surfactants In Lund the meeting was billed as the Fourth International Symposium on Surfactants in Solution Earlier three events were held under different rubrics but proceedings of all these symposia except the 7th SIS held in Ottawa in 1988 have been properly

documented As a matter of fact so far 10 volumes have appeared under the title Surfactants in Solution 1 2 3 The program for the 9th SIS was very comprehensive and many ramifications of surfactants were covered and it was a veritable international event It contained a total of 384 papers by 869 authors from practically every corner of our planet Just the sheer number of papers is a testimonial to the high tempo of research and tremendous interest in this wonderful class of materials As in the past there were plenary lectures 5 invited talks 37 oral presentations 195 and poster presentations 147 The plenary lectures were given by Prof J Th G Overbeek Prof C A Bunton Prof H Ti Tien and Dr J Swalen The lecture by Prof Overbeek the doyen of surface and colloid science was a real treat
