Specifying Software:

Specifying Software R. D. Tennent, 2002-02-25 Provides an innovative hands on introduction to techniques for specifying the behaviour of software components It is primarily intended for use as a text book for a course in the 2nd or 3rd year of Computer Science and Computer Engineering programs but it is also suitable for self study Using this book will help the reader improve programming skills and gain a sound foundation and motivation for subsequent courses in advanced algorithms and data structures software design formal methods compilers programming languages and theory The presentation is based on numerous examples and case studies appropriate to the level of programming expertise of the intended readership The main topics covered are techniques for using programmer friendly assertional notations to specify develop and verify small but non trivial algorithms and data representations and the use of state diagrams grammars and regular expressions to specify and develop recognizers for formal languages *Quality of Software Architectures Models and Architectures* Steffen Becker, Frantisek Plasil, Ralf H. Reussner, 2008-10-07 Models are used in all kinds of engineering disciplines to abstract from the various details of the modelled entity in order to focus on a specific aspect Like a blueprint in civil engineering a software architecture provides an abstraction from the full software system s complexity It allows software designers to get an overview on the system under development and to analyze its properties In this sense models are the foundation needed for software development to become a true engineering discipline Especially when reasoning on a software system s extra functional properties its software architecture carries the necessary information for early design time analyses These analyses take the software architecture as input and can be used to direct the design process by allowing a systematic evaluation of different design alternatives For example they can be used to cancel out decisions which would lead to architecture signs whose implementation would not comply with extra functional requirements like performance or reliability constraints Besides such quality attributes directly visible to the end user internal quality attributes e.g. maintainability also highly depend on the system s architecture In addition to the above mentioned technical aspects of software architecture models non technical aspects especially project management related activities require an explicit software architecture model The models are used as input for cost estimations time deadline and resource planning for the development teams They serve the project management activities of planning executing and controlling which are necessary to deliver high quality software systems in time and within the budget *Formal Methods for Software Architectures* Marco Bernardo, Paola Inverardi, 2003-11-03 In the past ten years or so software architecture has emerged as a central notion in the development of complex software systems Software architecture is now accepted in the software engineering research and development community as a manageable and meaningful abstraction of the system under development and is applied throughout the software development life cycle from requirements analysis and validation to design and down to code and execution level This book presents the tutorial lectures given by leading authorities at the Third International School on Formal Methods for

the Design of Computer Communication and Software Systems SFM 2003 held in Bertinoro Italy in September 2003 The book is ideally suited for advanced courses on software architecture as well as for ongoing education of software engineers using formal methods in their day to day professional work *Software Engineering* Richard W. Selby, 2007-06-04 This is the most authoritative archive of Barry Boehm's contributions to software engineering Featuring 42 reprinted articles along with an introduction and chapter summaries to provide context it serves as a how to reference manual for software engineering best practices It provides convenient access to Boehm's landmark work on product development and management processes The book concludes with an insightful look to the future by Dr Boehm **Handbook of Software Engineering** Sungdeok Cha, Richard N. Taylor, Kyochul Kang, 2019-02-11 This handbook provides a unique and in depth survey of the current state of the art in software engineering covering its major topics the conceptual genealogy of each subfield and discussing future research directions Subjects include foundational areas of software engineering e.g software processes requirements engineering software architecture software testing formal methods software maintenance as well as emerging areas e.g self adaptive systems software engineering in the cloud coordination technology Each chapter includes an introduction to central concepts and principles a guided tour of seminal papers and key contributions and promising future research directions The authors of the individual chapters are all acknowledged experts in their field and include many who have pioneered the techniques and technologies discussed Readers will find an authoritative and concise review of each subject and will also learn how software engineering technologies have evolved and are likely to develop in the years to come This book will be especially useful for researchers who are new to software engineering and for practitioners seeking to enhance their skills and knowledge **Software Requirements Using the Unified Process** Daniel R. Windle, L. Rene Abreo, 2003 *Software Requirements Using the Unified Process* A Practical Approach presents an easy to apply methodology for creating requirements Learn to build user requirements requirements architecture and the specifications more quickly and at a lower cost The authors present realistic solutions for the entire requirements process gathering analysis specification and maintenance **Computer Science and Educational Software Design** Pierre Tchounikine, 2011-06-27 Developing educational software requires thinking problematizing representing modeling implementing and analyzing pedagogical objectives and issues as well as conceptual models and software architectures Computer scientists face the difficulty of understanding the particular issues and phenomena to be taken into account in educational software projects and of avoiding a naive technocentered perspective On the other hand actors with backgrounds in human or social sciences face the difficulty of understanding software design and implementation issues and how computer scientists engage in these tasks Tchounikine argues that these difficulties cannot be solved by building a kind of general theory or general engineering methodology to be adopted by all actors for all projects educational software projects may correspond to very different realities and may be conducted within very different perspectives and with very different matters of concern Thus the issue

of understanding each others perspectives and elaborating some common ground is to be considered in context within the considered project or perspective To this end he provides the reader with a framework and means for actively taking into account the relationships between pedagogical settings and software and for working together in a multidisciplinary way to develop educational software His book is for actors engaged in research or development projects which require inventing designing adapting implementing or analyzing educational software The core audience is Master s and PhD students researchers and engineers from computer science or human and social sciences e g education psychology pedagogy philosophy communications or sociology interested in the issues raised by educational software design and analysis and in the variety of perspectives that may be adopted

Software Architecture Jan Bosch, Morven Gentleman, Christine Hofmeister, Juha Kuusela, 2002-07-31 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/FIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is treated explicitly during development product derivation in software product lines at run time and during system evolution Software architecture as an artifact has been decoupled from a particular lifecycle phase

Requirements Engineering: Foundation for Software Quality Roel Wieringa, Anne Persson, 2010-06-16 This volume compiles the papers accepted for presentation at the 16th Working Conference on Requirements Engineering Foundation for Software Quality REFSQ 2010 held in Essen during June 30 and July 1 2 2010 Since 1994 when the first REFSQ took place requirements engineering RE has never ceased to be a dominant factor influencing the quality of software systems and services Initially started as a workshop the REFSQ working conference series has now established itself as one of the leading international forums to discuss RE in its many relations to quality It seeks reports of novel ideas and techniques that enhance the quality of RE products and processes as well as reflections on current research and industrial RE practices One of the most appreciated characteristics of REFSQ is that of being a highly interactive and structured event REFSQ 2010 was no exception to this tradition In all we received a healthy 57 submissions After all submissions had been fully assessed by three independent reviewers and went through electronic

discussions the Program Committee met and finally selected 15 top quality full papers 13 research papers and 2 experience reports and 7 short papers resulting in an acceptance rate of 38 % The work presented at REFSQ 2009 continues to have a strong anchoring in practice with empirical investigations spanning over a wide range of application domains *New Trends in Software Methodologies, Tools and Techniques* Hamido Fujita, Vladimír Mařík, 2009 Papers presented at the Eighth International Conference on New Trends in Software Methodologies Tools and Techniques SoMeT 09 held in Prague Czech Republic from September 23rd to 25th 2009 P v
