Software Agents:

Software Agents for Future Communication Systems Alex Hayzelden,John Bigham,2012-12-06 Agent technology has recently become one of the most vibrant and fastest growing areas in information technology And advanced digital communicatiion is a central enabling technology for the coming information society So software agents and their exploitation for future communication systems are attracting particular attention from the research and development community as well as from economic and user communities interested in everyday private and professional digital communication applications This monograph like anthology is the first systematic introduction to software agents and future communication systems Fifteen coherently written chapters by leading software agent researchers provide complementary coverage of the relevant issues Multi agent systems and mobile agent approaches are presented in a well balanced way and applied to most important topics in future communication systems In addition the volume editors have provided a detailed introductory survey chapters

Internet Commerce and Software Agents Syed Mahbubur Rahman,Robert J. Bignall,2001-01-01 The Internet is revolutionizing retail merchandising and shopping Software agents are capable of automating the more routine tedious and time consuming tasks involved in the trading process Internet Commerce and Software Agents Cases Technologies and Opportunities addresses some major Internet commerce issues and the challenges to be met in achieving automated and secure Internet trading Software-Agents and Liberal Order Dirk Nicolas Wagner,2001 Liberal order and software agents long established ideas and modern technology are bridged The impulse for undertaking this effort comes from the observation that it becomes difficult for computer science alone to create order for and within machines The growing complexity of computer systems open networks like the Internet and the increasingly social role of software entities push the traditional quest for total global control out of reach Economic theory of social order offers extensive experience with such conditions so that it can complement and guide research in computer science It is shown that a common understanding between economics and computer science s sub field of distributed artificial intelligence is possible on the level of software agents On this basis four fundamental problems of social order are encircled first the requirement to overcome and prevent state of nature situations in the sense of Thomas Hobbes second the necessity to accommodate unpredictable individual actors third the challenge of exiting the small worlds of traditional software systems and fourth the ambition to reach a transaction cost efficient social order Economics can contribute to an understanding and to possible solutions of these problems by unfolding the idea of liberal order for software agents In a systematic analysis that covers the order of rules the model of the individual actor and the order of actions it is shown that the conditions for liberal order can be created without exception in agent environments Customer-based IP Service Monitoring with Mobile Software Agents Manuel Günter,2012-12-06 Presenting mobile software agents for Internet servic monitoring this research monograph discusses newly standardized Internet technologies that allow service providers to offer secured Internet services with quality

guarantees Yet today the customers of such services have no independent tool to verify monitor the service quality This book shows why mobile software agents are best fit to fill the gap The book is addressed to mobile agent researchers looking for new and fruitful application areas It will also be a valuable resource for innovative Internet providers who are looking for a service monitoring infrastructure going beyond monthly reports **Designing Distributed Learning Environments with Intelligent Software Agents** Fuhua Oscar Lin,2005-01-01 Designing Distributed Learning Environments with Intelligent Software Agents reports on the most recent advances in agent technologies for distributed learning Chapters are devoted to the various aspects of intelligent software agents in distributed learning including the methodological and technical issues on where and how intelligent agents can contribute to meeting distributed learning needs today and tomorrow This book benefits the AI artificial intelligence and educational communities in their research and development offering new and interesting research issues surrounding the development of distributed learning environments in the Semantic Web age In addition the ideas presented in the book are applicable to other domains such as Agent Supported Web Services distributed business process and resource integration computer supported collaborative work CSCW and e Commerce *Intelligent Software Agents* Walter Brenner,Rüdiger Zarnekow,Hartmut Wittig,2012-12-06 2 chapter contains examples of intelligent agents arranged according to their appli cation areas Chapter 7 closes with a prospective view of the future development of intelligent agents Everyone concerned with the Internet and the new possibilities of information and communication technology knows that nowadays there is no area that is devel oping faster The authors are aware of the dynamics of this research area and its effects when they describe such a fast developing area in a slow traditional me dium like a book One thing is sure today when the book appears on the market new intelligent agents will already exist and some of the hypotheses made by this book will have been shown to be incorrect Why despite this does it make sense to write a classical book on this subject Is there an alternative Experience shows that the majority of the people in business and public life who make decisions on the use of new technologies continue to prefer books and articles in periodicals rather than electronic sources such as the Internet Or is there some other reason for the enormous success of Nicolas Negroponte s book Being Digital which we thank for multimedia and many concepts of the digital and networked world and even intelligent agents Today a book is still the only way to establish a new area Software Agent-Based Applications, Platforms and Development Kits Rainer Unland,Matthias Klusch,Monique Calisti,2006-01-27 This book introduces major agent platforms frameworks systems tools and applications Each system is described by their developers in sufficient detail so that the reader can get a good understanding of the architecture functionality and application areas of the system All systems are running systems One main focus of the book lies on agent platforms and toolkits **Applications of Software Agent Technology in the Health Care Domain** Antonio Moreno,John L. Nealon,2003-10-24 This volume contains a collection of papers that provides a unique novel and up to date overview of how software agents technology is being applied in very diverse problems in health care

ranging from community care to management of organ transplants It also provides an introductory survey that highlights the main issues to be taken into account when deploying agents in the health care area The intended audience includes graduate and postgraduate students specializing in artificial intelligence and researchers interested in the application of new technologies **Innovations in Computing Sciences and Software Engineering** Tarek Sobh,Khaled Elleithy,2010-06-26 Innovations in Computing Sciences and Software Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Software Engineering Computer Engineering and Systems Engineering and Sciences Topics Covered Image and Pattern Recognition Compression Image processing Signal Processing Architectures Signal Processing for Communication Signal Processing Implementation Speech Compression and Video Coding Architectures Languages and Systems Algorithms Databases Embedded Systems and Applications File Systems and I O Geographical Information Systems Kernel and OS Structures Knowledge Based Systems Modeling and Simulation Object Based Software Engineering Programming Languages and Programming Models and tools Parallel Processing Distributed Scheduling Multiprocessing Real time Systems Simulation Modeling and Development and Web Applications Signal and Image Processing Content Based Video Retrieval Character Recognition Incremental Learning for Speech Recognition Signal Processing Theory and Methods and Vision based Monitoring Systems Software and Systems Activity Based Software Estimation Algorithms Genetic Algorithms Information Systems Security Programming Languages Software Protection Techniques Software Protection Techniques and User Interfaces Distributed Processing Asynchronous Message Passing System Heterogeneous Software Environments Mobile Ad Hoc Networks Resource Allocation and Sensor Networks New trends in computing Computers for People of Special Needs Fuzzy Inference Human Computer Interaction Incremental Learning Internet based Computing Models Machine Intelligence Natural Language **Software Agents** Stanford University. as grids or clouds These agents consider trustworthiness in their course of negotiation and select offers with respect to product price and seller reputation To automate the selection process we seek an appropriate MCDM method that provides clear advice for an agent prior to negotiating We compare eleven well known MCDM methods and choose the TOPSIS approach of Hwang and Yoon since it produces comprehensible and plausible results with a justifiable amount of effort We modify the method and present a draft named xTOPSIS that promises intertemporal performance analysis for further automatation The resulting tool is finally tested and evaluated in the context of a scenario similar to the eRep Social Knowledge for e Governance project   **Software Engineering for Multi-agent Systems ...** ,2004   **Software Agents for Future Communication Systems** Alex Hayzelden,John Bigham,1999-05-04   **Software Agents and Soft Computing: Towards Enhancing Machine Intelligence** Hyacinth S.
