**Evaluation of Soil Organic Matter Models** David S. Powlson, Pete Smith, Jo U. Smith, 2013-06-29 Soil organic matter SOM represents a major pool of carbon within the biosphere roughly twice than in atmospheric CO<sub>2</sub> SOM models embody our best understanding of soil carbon dynamics and are needed to predict how global environmental change will influence soil carbon stocks These models are also required for evaluating the likely effectiveness of different mitigation options The first important step towards systematically evaluating the suitability of SOM models for these purposes is to test their simulations against real data Since changes in SOM occur slowly long term datasets are required This volume brings together leading SOM model developers and experimentalists to test SOM models using long term datasets from diverse ecosystems land uses and climatic zones within the temperate region      *The Regional Impacts of Climate Change*

**Patterns of Land Degradation in Drylands** Eva Nora Mueller,John Wainwright,Anthony J. Parsons,Laura Turnbull,2013-08-15 This book explores the theory of ecogeomorphic pattern process linkages using case studies from Europe Africa Australia and North America Sets forth a research agenda for the emerging field of ecogeomorphology in drylands land degradation studies Compensatory Growth: an Adaptation to Environmental Stress in Plants and Animals Chao Li,Bernard Roitberg,E. Tobias Krause,2024-03-27 Compensatory growth CG is defined as a change in growth rate usually positive following a period of reduced biomass or slowed growth due to some perturbation e g nutrient deprivation parasite load tissue damage or natural anthropogenic disturbance The phenomenon occurs throughout the plant and animal kingdoms and while it is primarily observed in species with short lifespans it has also been detected in longer living organisms such as trees CG occurs at the individual level as a variable life history trait but has the potential to impact the performance of whole populations and communities The Biology of Arid Soils Blaire Steven,2017-07-24 Soils have been called the most complex microbial ecosystems on Earth A single gram of soil can harbor millions of microbial cells and thousands of species However certain soil environments such as those experiencing dramatic change exposing new initial soils or that are limited in precipitation limit the number of species able to survive in these systems In this respect these environments offer unparalleled opportunities to uncover the factors that control the development and maintenance of complex microbial ecosystems This book collects chapters that discuss the abiotic factors that structure arid and initial soil communities as well as the diversity and structure of the biological communities in these soils from viruses to plants

*Observing, Modeling and Understanding Processes in Natural and Managed Peatlands* Michel Bechtold,Björn Klöve,Annalea Lohila,Massimo Lupascu,Line Rochefort,Hanna Silvennoinen,2022-05-25 Natural Resources Conservation and Advances for Sustainability Manoj Kumar Jhariya,Ram Swaroop Meena,Arnab Banerjee,Surya Nandan Meena,2021-09-24 Natural Resources Conservation and Advances for Sustainability addresses the latest challenges associated with the management and conservation of natural resources It presents interdisciplinary approaches to promote advances in solving these challenges By examining what has already been done and analyzing it in the context of what still needs to be done particularly in the context of latest technologies and sustainability the book helps to identify ideal methods for natural resource management and conservation Each chapter begins with a graphical abstract and presents complicated or detailed content in the form of figures or tables In addition the book compares the latest techniques with conventional techniques and troubleshoots conventional methods with modifications making it a practical resource for researchers in environmental science and natural resource management Discusses the pros and cons of past and current endeavors related to natural resource management Presents recent technologies and methods for management and conservation particularly with applications for sustainability Covers a variety of disciplines from environmental science to life science Includes a graphical

abstract as well as a section on significant achievements in the field and future perspectives      *Uncertainties in Environmental Modelling and Consequences for Policy Making* Philippe Baveye, Jaroslav Mysiak, Magdeline Laba, 2009-05-14 Mathematical modelling has become in recent years an essential tool for the prediction of environmental change and for the development of sustainable policies Yet many of the uncertainties associated with modelling efforts appear poorly understood by many especially by policy makers This book attempts for the first time to cover the full range of issues related to model uncertainties from the subjectivity of setting up a conceptual model of a given system all the way to communicating the nature of model uncertainties to non scientists and accounting for model uncertainties in policy decisions Theoretical chapters providing background information on specific steps in the modelling process and in the adoption of models by end users are complemented by illustrative case studies dealing with soils and global climate change All the chapters are authored by recognized experts in their respective disciplines and provide a timely and uniquely comprehensive coverage of an important field      **Soil Contamination** Marcelo L. Larramendy, Sonia Soloneski, 2021-06-23 This edited book *Soil Contamination Threats and Sustainable Solutions* is intended to provide an update on different aspects of soil contamination exerted by a multiplicity of exogenous and endogenous causes We hope that this book will continue to increase information from diverse sources and to give some real life examples extending the appreciation of the complexity of this subject in a way that may stimulate new approaches in relevant fields      Microbial Ecology of Arid Terrestrial Systems Thulani P. Makhalanyane, Don Cowan, Jean-Baptiste Ramond, 2016-09-14 Water is usually referred to as the Molecule of Life It constitutes the most abundant molecule in living micro organisms and is also essential for critical biochemical reactions both for the global functioning and maintenance of Ecosystems e g Photosynthesis and individual microbial cells e g ATP hydrolysis However most of Earth s terrestrial environments present deficiencies in bioavailable water Arid environments cover around a third of the land s surface are found on the six continents and with the anthropogenic desertification phenomenon will increase Commonly defined by having a ratio of precipitation to potential evapotranspiration  $P/PET$  below 1 arid environments being either hot or cold are characterized by scant and erratic plant growth and low densities in macro fauna Consequently these ecosystems are microbially mediated with microbial communities particularly driving the essential N and C biogeochemical cycles Due to the relatively simple trophic structure of these biomes arid terrestrial environments have subsequently been used as ideal ecosystems to capture and model interactions in edaphic microbial communities To date we have been able to demonstrate that edaphic microorganisms i e Fungi Bacteria Archaea and Viruses in arid environments are abundant highly diverse different from those of other terrestrial systems both in terms of diversity and function and are important for the stability and productivity of these ecosystems Moreover arid terrestrial systems are generally considered Mars like environments Thus they have been the favored destination for astro micro biologists aiming to better understand life s potential distribution and adaptation strategies in the Universe and develop terraforming approaches

Altogether these points demonstrate the importance of significantly improving our knowledge in the microbial community composition particularly for Fungi Archaea and Viruses assembly processes and functional potentials of arid terrestrial systems as well as their adaptation mechanisms to aridity and generally to various other environmental stresses This Research Topic was proposed to provide further insights on the microbial ecology of hot and cold arid edaphic systems We provide a detailed review and nine research articles spanning hot and cold deserts edaphic rhizospheric BSC and endolithic environments as well as culture dependent and independent approaches
