Frete,2012-06-05 The Ecology of Nusa Tenggara and Maluku is a comprehensive ecological survey of a series ecologically diverse islands in the Pacific It contains extensive baseline data on the region s people ecosystems biodiversity and land use and discusses these in a historical as well as a developmental context It also provides guidelines for scientific researchers on worthwhile ecological and socio economic research projects This region is the most diverse in Indonesia Its myriad islands range from small atolls to active volcanic islands rising 3 500 meters above sea level Each province has extensive coastlines only 10 percent of the province of Maluku is land The seas include shallow continental shelves and some of the deepest sea basins in the world The complexity and vulnerability of these islands mean that development and environment are

inextricably linked If this is not understood and acted upon there is no possibility for the ecologically sustainable development of Nusa Tenggara and Maluku *Shifting Ground* Peter H. Lindert,2000-10-12 Peter Lindert evaluates environmental concerns about soil degradation in two very large countries China and Indonesia where anecdotal evidence has suggested serious problems In this book Peter Lindert evaluates environmental concerns about soil degradation in two very large countries China and Indonesia where anecdotal evidence has suggested serious problems Lindert does what no scholar before him has done using new archival data sets he measures changes in soil productivity over long enough periods of time to reveal the influence of human activity China and Indonesia are good test cases because of their geography and history China has been at the center of global concerns about desertification and water erosion which it may have accelerated with intense agriculture Most of Indonesia s lands were created by volcanoes and erosion and its rapid deforestation and shifting slash burn agriculture have been singled out for international censure Lindert s investigation suggests that human mismanagement is not on average worsening the soil quality in China and Indonesia Human cultivation lowers soil nitrogen and organic matter but has offsetting positive effects Economic development and rising incomes may even lead to better soil Beyond the importance of Lindert s immediate findings this book opens a new area of study quantitative soil history and raises the standard for debating soil trends Response to Land Degradation E M

Bridges,2019-04-24 This work is intended for advanced readers interested in methods of sustainable land management the prevention and control of land degradation It offers a coherent view of the situation concerning land degradation and the human response to the problem It is generally recognized that technological solutions alone cannot solve the problems of land degradation This book discusses the role of land use and land management policies programmes insitutional innovations and economic incentives for the control and prevention of land degradation Special attention is given to legal issues at the international level and in individual countries **Liberation Ecologies** Richard Peet,Michael Watts,2004-08-02 Liberation

Ecologies elaborates a political economic explanation of environmental crisis drawing from the most recent advances in social theory Forest Ecosystems David A. Perry,Ram Oren,Stephen C. Hart,2008-07-24 2009 Outstanding Academic Title Choice This acclaimed textbook is the most comprehensive available in the field of forest ecology Designed for advanced students of forest science ecology and environmental studies it is also an essential reference for forest ecologists foresters and land managers The authors provide an inclusive survey of boreal temperate and tropical forests with an emphasis on ecological concepts across scales that range from global to landscape to microscopic Situating forests in the context of larger landscapes they reveal the complex patterns and processes observed in tree dominated habitats The updated and expanded second edition covers Conservation Ecosystem services Climate change Vegetation classification Disturbance Species interactions Self thinning Genetics Soil influences Productivity Biogeochemical cycling Mineralization Effects of herbivory Ecosystem stability *From Slash-and-burn to Replanting* François Ruf,Frederic Lançon,2004 The most traditional and widely used farming systems in the humid upland tropics are based on fallowing and various forms of slash and burn agriculture Their sustainability depends on the duration of the fallow When fallow duration drops below the threshold of seven or eight years crop yield usually declines A concept described as forest rent Given the plight of millions of farmers the development of upland agriculture has become increasingly important This book reports the results of fieldwork conducted by the editors and other experts in some 40 regions of Indonesia from 1989 to 2001 It finds that some of the most successful improvements have been the result of innovations by the farmers themselves *Strategic Issues for Watershed Development in Asia* William Magrath,John B.
