Soil and Water Quality at Different Scales Peter A. Finke, Johan Bouma, Marcel R. Hoosbeek, 2013-03-14 Integrated studies on the assessment and improvement of soil and water quality have to deal almost inevitably with issues of scale since the spatial support of measurements the model calculations and the presentation of results usually vary This book contains the selected and edited proceedings of a workshop devoted to issues of scale entitled Soil and Water Quality at Different Scales which was held in 1996 in Wageningen It is intended for environmental researchers scientists and MSc and PhD students Part 1 covers current issues and methodologies with scale related soil and water quality research Part 2 covers agroecological and hydrological case studies in which scale transforms form an important part of the research chain Part 3 consists of papers focusing on methodologies and up and downscaling Part 4 contains review papers based on modellers and statisticians considerations as well as the papers and posters presented during the workshop Part 5 consists of short research notes

Soil Erosion at Multiple Scales F. W. T.

Penning de Vries, F. Agus, J. M. Kerr, 1998 Approaches to research on the causes and impacts of soil erosion have changed significantly over recent years Whereas biophysical research traditionally utilized small carefully managed erosion plots models and methods are now available to study impacts of broad scale management on the hydrology and water quality of catchments and even river basins Corresponding research tools have been developed for social and economic analysis at the household farm and community levels This book reviews the latest developments in such soil erosion studies These are considered on a matrix of scales from plot to river basin and from farm to national policy Some chapters review background issues while others consider specific methods Conclusions of working groups are presented in another chapter The book is based on papers presented at a workshop held in Indonesia in November 1997 and includes authors from Europe America Australia and Asia as well as from several of the CGIAR centers

Multi-scale Understanding of Vegetation

Ecosystems Tiantian Chen, Li Peng, 2025-06-23 This book highlights the vital role of vegetation in terrestrial surface systems emphasizing its importance in regulating climate change acting as a carbon sink and maintaining the surface energy balance by absorbing CO₂ from human activities However urbanization extreme droughts floods fires and other events negatively impact biodiversity increase tree mortality trigger wildfires and exacerbate food insecurity and poverty Understanding the influence of global climate change and human activity on vegetation patterns is essential The structure and function of vegetation ecosystems result from interactions between natural ecological processes and socio cultural factors leading to variability across different spatial and temporal scales While local scale studies provide detailed insights they are often difficult to generalize Conversely large scale studies can inform comprehensive planning but may overlook nuances between subsystems Therefore enhancing research on the evolution of vegetation ecosystems and their responses to climate change across multiple scales is crucial to mitigate risks and maintain ecosystem balance Extensive studies have explored the spatiotemporal dynamics and driving forces on large scale vegetation structure productivity and resilience especially on a global scale However there is limited research on vegetation characteristics in specific geological conditions and geomorphic regions particularly in karst regions Karst landforms account for 15% of the global vegetated land and are vital for global carbon and water cycles as well as biodiversity conservation Southwest China the largest contiguous karst region represents 0.36% of the vegetated land but contributes 5% of global aboveground biomass making it a key carbon sink However its fragile ecological conditions frequent extreme climate events and unsustainable human activities have led to significant vegetation degradation and desertification resulting in severe environmental damage in recent decades To address these issues ecological restoration measures have been launched since the early 2000s to boost vegetation

Handbook of Erosion Modelling R. P. C. Morgan, Mark Nearing, 2016-04-13 The movement of sediment and associated pollutants over the landscape and into water bodies is of increasing concern with respect to pollution control prevention of muddy floods and environmental protection In addition the loss of soil on site has implications for declining agricultural productivity loss of

biodiversity and decreased amenity and landscape value The fate of sediment and the conservation of soil are important issues for land managers and decision makers In developing appropriate policies and solutions managers and researchers are making greater use of erosion models to characterise the processes of erosion and their interaction with the landscape A study of erosion requires one to think in terms of microseconds to understand the mechanics of impact of a single raindrop on a soil surface while landscapes form over periods of thousands of years These processes operate on scales of millimetres for single raindrops to mega metres for continents Erosion modelling thus covers quite a lot of ground This book introduces the conceptual and mathematical frameworks used to formulate models of soil erosion and uses case studies to show how models are applied to a variety of purposes at a range of spatial and temporal scales The aim is to provide land managers and others with the tools required to select a model appropriate to the type and scale of erosion problem to show what users can expect in terms of accuracy of model predictions and to provide an appreciation of both the advantages and limitations of models Problems covered include those arising from agriculture the construction industry pollution and climatic change and range in scale from farms to small and large catchments The book will also be useful to students and research scientists as an up to date review of the state of art of erosion modelling and through a knowledge of how models are used in practice in highlighting the gaps in knowledge that need to be filled in order to develop even better models

Kepner, 2007-10-02 This book examines environmental security from the perspective of landscape sciences identifying the forces that threaten environmental security at all levels It stems from the last five years of the Pilot Study Project on Use of Landscape Sciences for Environmental Assessment sponsored by the NATO Committee on the Challenges of Modern Society Readers explore concepts of environmental security from subjective and objective perspectives Landscape Ecology for Sustainable Environment and Culture Bojie Fu, Bruce Jones

K, 2013-03-26 Climate change and the pressures of escalating human demands on the environment have had increasing impacts on landscapes across the world In this book world class scholars discuss current and pressing issues regarding the landscape landscape ecology social and economic development and adaptive management Topics include the interaction between landscapes and ecological processes landscape modeling the application of landscape ecology in understanding cultural landscapes biodiversity climate change landscape services landscape planning and adaptive management to provide a comprehensive view that allows readers to form their own opinions Professor Bojie Fu is an Academician of Chinese Academy of Sciences and Chair of scientific committee at the Research Center for Eco Environmental Sciences Chinese Academy of Sciences Beijing China Professor K Bruce Jones is the Executive Director for Earth and Ecosystem Sciences Division at Desert Research Institute University of Nevada Las Vegas USA *Ecological Footprints of Climate Change* Uday Chatterjee, Angela Oyilieze Akanwa, Suresh Kumar, Sudhir Kumar Singh, Abira Dutta Roy, 2023-01-01 This book explores global implications of human activities that trigger changes in climate and the appropriate scientific adaptive and sustainable approaches as a proven information tool It reveals that the ecological social and economic dynamics of the changing earth encompasses huge uncertainties coupled with its ability to be linked to other forms of global change From a scientific perspective multiple efforts are expedient to integrate the many aspects of global changes Increases in science and technology have afforded nations the ability to plan for the future by investing in adaptive and mitigative measures to monitor present and future changes Just as the climatic and ecological impacts of climate change are unequally distributed so is the adaptive capacity to cope with these impacts in different nations Considering that wealth infrastructure and political stability all contribute to a nation s capacity to anticipate and respond to change So global South nations who are disadvantaged in these areas are faced with more inequalities and more unique adaptive strategies There is need for increased aggregate efforts and interaction between scientists stakeholders and policy makers to improve both decision making and global change in science Scientists and researchers need to work on expanding the range of policies that are proposed debated and implemented This way novelty new ideas and methodologies are infused into the society At this point of multiple climate footprints there is an immense need to explore all ideas evaluating their possibilities in presenting alternative futures developing alternative policies and adaptive options to solve the intractable ecological footprints of climate change **Landscape Ecological Applications in Man-Influenced Areas** Sun-Kee Hong, Nobukazu

Nakagoshi, Bojie Fu, Yukihiro Morimoto, 2007-01-29 Landscape Ecological Applications in Man Influenced Areas not only expands the concept of landscape ecology but also applies its principles to man influenced ecosystems New dimensions of landscape ecological research in a global change such as urbanization biodiversity and land transformation are explored in this book The book also includes case studies concerning landscape analysis and evaluation using spatial analysis and landscape modelling for establishing sustainable management strategy in urban and agricultural landscapes *Dynamics of Multiscale Earth Systems* Horst J. Neugebauer, Clemens Simmer, 2008-01-26 In many aspects science becomes conducted nowadays through technology and preferential criteria of economy Thus investigation and knowledge is evidently linked to a specific purpose Especially Earth science is confronted with two major human perspectives concerning our natural environment sustainability of resources and assessment of risks Both aspects are expressing urgent needs of the living society but in the same way those needs are addressing a long lasting fundamental challenge which has so far not been met Following on the patterns of economy and technology the key is presumed to be found through a development of feasible concepts for a management of both our natural environment and in one or the other way the realm of life Although new techniques for observation and analysis led to an increase of rather specific knowledge about particular phenomena yet we fail now even more frequently to avoid unforeseen implications and sudden changes of a situation Obviously the improved technological tools and the assigned expectations on a management of nature still exceed our traditional scientific experience and accumulated competence Earth and Life Sciences are nowadays exceedingly faced with the puzzling nature of an almost boundless network of relations i.e. the complexity of phenomena with respect to their variability The disciplinary notations and their particular approaches are thus no longer accounting sufficiently for the recorded context of phenomena for their permanent variability and their unpredictable implications The large environmental changes of glacial climatic cycles for instance demonstrate this complexity of such a typical phenomenology Environmental Modelling John Wainwright, Mark Mulligan, 2013-01-22 Simulation models are an established method used to investigate processes and solve practical problems in a wide variety of disciplines Central to the concept of this second edition is the idea that environmental systems are complex open systems The authors present the diversity of approaches to dealing with environmental complexity and then encourage readers to make comparisons between these approaches and between different disciplines Environmental Modelling Finding Simplicity in Complexity 2nd edition is divided into four main sections An overview of methods and approaches to modelling State of the art for modelling environmental processes Tools used and models for management Current and future developments The second edition evolves from the first by providing additional emphasis and material for those students wishing to specialize in environmental modelling This edition Focuses on simplifying complex environmental systems Reviews current software tools and techniques for modelling Gives practical examples from a wide variety of disciplines e.g. climatology ecology hydrology geomorphology and engineering Has an associated website containing colour

images links to WWW resources and chapter support pages including data sets relating to case studies exercises and model animations This book is suitable for final year undergraduates and postgraduates in environmental modelling environmental science civil engineering and biology who will already be familiar with the subject and are moving on to specialize in the field It is also designed to appeal to professionals interested in the environmental sciences including environmental consultants government employees civil engineers geographers ecologists meteorologists and geochemists Recarbonization of the Biosphere Rattan Lal,Klaus Lorenz,Reinhard F. Hüttnl,Bernd Uwe Schneider,Joachim von Braun,2012-03-30 Human activities are significantly modifying the natural global carbon C cycles and concomitantly influence climate ecosystems and state and function of the Earth system Ever increasing amounts of carbon dioxide CO₂ are added to the atmosphere by fossil fuel combustion but the biosphere is a potential C sink Thus a comprehensive understanding of C cycling in the biosphere is crucial for identifying and managing biospheric C sinks Ecosystems with large C stocks which must be protected and sustainably managed are wetlands peatlands tropical rainforests tropical savannas grasslands degraded desertified lands agricultural lands and urban lands However land based sinks require long term management and a protection strategy because C stocks grow with a progressive improvement in ecosystem health *Routledge Handbook of the Study of the Commons* Blake Hudson,Jonathan Rosenbloom,Dan Cole,2019-01-04 This comprehensive Handbook serves as a unique synthesis and resource for understanding how analytical frameworks developed within the literature assist in understanding the nature and management of commons resources Such frameworks include those related to Institutional Analysis and Development Social Ecological Systems and Polycentricity among others The book aggregates and analyses these frameworks to lay a foundation for exploring how they apply according to scholars across a wide range of disciplines It includes an exploration of the unique problems arising in different disciplines of commons study including natural resources forests oceans water energy ecosystems etc economics law governance the humanities and intellectual property It shows how the analytical frameworks discussed early in the book facilitate interdisciplinarity within commons scholarship This interdisciplinary approach within the context of analytical frameworks helps facilitate a more complete understanding of the similarities and differences faced by commons resource users and managers the usefulness of the commons lens as an analytical tool for studying resource management problems and the best mechanisms by which to formulate policies aimed at addressing such problems Chapter 26 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
