of the Earth's space environment it has become evident that the interaction between the ionosphere and the magnetosphere  
plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields Interestingly it was recently  
discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system  
Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014  
this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm changing role  
that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments The 2014 Chapman

thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling

processes Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities Topics covered in this volume include Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasmas The unified global modeling of the ionosphere and magnetosphere at the Earth and other planets New knowledge of these coupled interactions for heliophysicists and planetary scientists with a cross disciplinary approach involving advanced measurement and modeling techniques Magnetosphere Ionosphere Coupling in the Solar System is a valuable resource for researchers in the fields of space and planetary science atmospheric science space physics astronomy and geophysics Read an interview with the editors to find out more <https://eos.org/editors-vox-filling-earths-space-environment-from-the-sun-or-the-earth> [Experimental and Theoretical Analyses of Solar Wind-magnetosphere-ionosphere Coupling](#) Mervyn Paul Freeman,1989
