Aircraft Wake Turbulence and Its Detection John Olsen, 2012-12-06 The combination of increasing airport congestion and the advent of large transports has caused increased interest in aircraft wake turbulence A quantitative understanding of the interaction between an aircraft and the vortex wake of a preceding aircraft is necessary for planning future high density air traffic patterns and control systems The nature of the interaction depends on both the characteristics of the following aircraft and the characteristics of the wake Some of the questions to be answered are What determines the full characteristics of the vortex wake What properties of the following aircraft are important What is the role of pilot response How are the wake characteristics related to the generating aircraft parameters How does the wake disintegrate and where Many of these questions were addressed at this first Aircraft Wake Turbulence Symposium sponsored by the Air Force Office of Scientific Research and The Boeing Company Workers engaged in aerodynamic research airport operations and instrument development came from several countries to present their results and exchange information The new results from the meeting provide a current picture of the state of the knowledge on vortex wakes and their interactions with other aircraft Phenomena previously regarded as mere curiosities have emerged as important tools for understanding or controlling vortex wakes The new types of instability occurring within the wake may one day be used for promoting early disintegration of the hazardous twin vortex structure *Hearings on National Defense Authorization Act for Fiscal Year 2003--H.R. 4546 and Oversight of Previously Authorized Programs, Before the Committee on Armed Services, House of Representatives, One Hundred Seventh Congress, Second Session* United States.
