Special Topics In Transport Phenomena Hardcover:

Special Topics in Transport Phenomena G. Astarita, R. Ocone, 2001-12-21 This book is a research monograph on transport phenomena. The topics discussed are often mathematically simple though conceptually complex. The book is written in a colloquial style which a good teacher uses in the classroom. It originates from the author's wealth of teaching experience in this area and incorporates suggestions from colleagues worldwide.

Selected Topics in transport phenomena Robert Byron Bird, 1965

Transport Phenomena Fundamentals Joel L. Plawsky, 2020-02-27 The fourth edition of *Transport Phenomena Fundamentals* continues with its streamlined approach to the subject based on a unified treatment of heat, mass, and momentum transport using a balance equation approach. The new edition includes more worked examples within each chapter and adds confidence building problems at the end of each chapter. Some numerical solutions are included in an appendix for students to check their comprehension of key concepts. Additional resources online include exercises that can be practiced using a wide range of software programs available for simulating engineering problems such as COMSOL, Maple, Fluent, Aspen, Mathematica, Python, and MATLAB, lecture notes, and past exams. This edition incorporates a wider range of problems to expand the utility of the text beyond chemical engineering. The text is divided into two parts which can be used for teaching a two-term course. Part I covers the balance equation in the context of diffusive transport: momentum, energy, mass, and charge. Each chapter adds a term to the balance equation, highlighting that term's effects on the physical behavior of the system and the underlying mathematical description. Chapters familiarize students with modeling and developing mathematical expressions based on the analysis of a control volume, the derivation of the governing differential equations, and the solution to those equations with appropriate boundary conditions. Part II builds on the diffusive transport balance equation by introducing convective transport terms, focusing on partial rather than ordinary differential equations. The text describes paring down the full microscopic equations governing the phenomena to simplify the models and develop engineering solutions, and it introduces macroscopic versions of the balance equations for use where the microscopic approach is either too difficult to solve or would yield much more information than is actually required. The text discusses the momentum, Bernoulli energy, and species continuity equations, including a brief description of how these equations are applied to heat exchangers, continuous contactors, and chemical reactors. The book introduces the three fundamental transport coefficients: the friction factor, the heat transfer coefficient, and the mass transfer coefficient, in the context of boundary layer theory. Laminar flow situations are treated first, followed by a discussion of turbulence. The final chapter covers the basics of radiative heat transfer, including concepts such as blackbodies, graybodies, radiation shields, and enclosures.

Hydrocarbon Processing, 1986

Basic Transport Phenomena in Biomedical Engineering Ronald L. Fournier, 2017-08-07 This will be a substantial revision of a good selling text for upper division first graduate courses in biomedical transport phenomena offered in many departments of biomedical and chemical engineering. Each chapter will be

updated accordingly with new problems and examples incorporated where appropriate A particular emphasis will be on new information related to tissue engineering and organ regeneration A key new feature will be the inclusion of complete solutions within the body of the text rather than in a separate solutions manual Also Matlab will be incorporated for the first time with this Fourth Edition **A Modern Course in Transport Phenomena** David C. Venerus, Hans Christian Öttinger, 2018-03-15 Integrating nonequilibrium thermodynamics and kinetic theory this unique text presents a novel approach to the subject of transport phenomena *Three Plays of Maureen Hunter* Hunter, Maureen, 2003 Book is clean and tight No writing in text Like New *Journal of Computational and Theoretical Nanoscience* ,2004 **Selected Topics in transport phenomena** ,1965 *Transport Processes in Chemically Reacting Flow Systems* Daniel E.
