Strings, Branes and Dualities L. Baulieu, Philippe Di Francesco, Michael Douglas, Vladimir Kazakov, Marco Picco, Paul Windey, 2012-12-06 As recent developments have shown supersymmetric quantum field theory and string theory are intimately related with advances in one area often shedding light on the other The organising ideas of most of these advances are the notion of duality and the physics of higher dimensional objects or p branes The topics covered in the present volume include duality in field theory in particular in supersymmetric field theory and supergravity and in string theory The Seiberg Witten theory and its recent developments are also covered in detail A large fraction of the volume is devoted to the current state of the art in M theory in particular its underlying superalgebra as well as its connection with superstring and N 2 strings The physics of D branes and its essential role in the beautiful computation of the black hole entropy is also carefully covered Finally the last two sets of lectures are devoted to the exciting matrix approach to non perturbative string theory

Unity from Duality: Gravity, Gauge Theory and Strings Constantin P. Bachas, Adel Bilal, Michael R. Douglas, Nikita A. Nekrasov, Francois David, 2008-01-26 In a distilled and pedagogical fashion the contributions to this volume of the famous summer school in Les Houches cover the recent developments in supersymmetric string theory the gauge theory string theory correspondence and string duality Further chapters deal with quantum gravity and D brane geometry Black hole mechanics and cosmology are treated too as well as the AdS CFT correspondence The book is a comprehensive introduction to the recent developments in string M theory and quantum gravity It addresses graduate students in physics and astrophysics

Strings, Branes and Gravity Jeffrey Harvey, Shamit Kachru, Eva Silverstein, 2001 Many of the topics in this book are outgrowths of the spectacular new understanding of duality in string theory which emerged around 1995 They include the AdS CFT correspondence and its relation to holography the matrix theory formulation of M theory the structure of black holes in string theory the structure of D branes and M branes and detailed development of dualities with N 1 and N 2 supersymmetry In addition there are lectures covering experimental and phenomenological aspects of the Standard Model

and its extensions and discussions on cosmology including both theoretical aspects and the exciting new experimental evidence for a non zero cosmological constant Contents TASI Lectures on Branes Black Holes and Anti De Sitter Space M J Duff D Brane Primer C V Johnson TASI Lectures on Black Holes in String Theory A W Peet TASI Lectures Cosmology for String Theorists S M Carroll TASI Lectures on Matrix Theory T Banks TASI Lectures on M Theory Phenomenology M Dine TASI Lectures Introduction to the AdS CFT Correspondence I R Klebanov TASI Lectures on Compactification and Duality D R Morrison Compactification Geometry and Duality N 2 P S Aspinwall TASI Lectures on Non BPS D Brane Systems J H Schwarz Lectures on Warped Compactifications and Stringy Brane Constructions S Kachru TASI Lectures on the Holographic Principle D Bigatti L Susskind Readership Graduate students postdoctoral fellows and researchers in high energy physics

Gravity and Strings Tomás Ortín, 2004 One appealing feature of string theory is that it provides a theory of quantum gravity Gravity and Strings is a self contained pedagogical exposition of this theory its foundations and its basic results In Part I the foundations are traced back to the very early special relativistic field theories of gravity showing how such theories lead to general relativity Gauge theories of gravity are then discussed and used to introduce supergravity theories In Part II some of the most interesting solutions of general relativity and its generalizations are studied The final Part presents and studies string theory from the effective action point of view using the results found earlier in the book as background This 2004 book will be useful as a reference book for graduate students and researchers as well as a complementary textbook for courses on gravity supergravity and string theory Strings, Branes and Extra Dimensions Steven Scott Gubser, J. D.

Lykken, 2004 This book covers some recent advances in string theory and extra dimensions Intended mainly for advanced graduate students in theoretical physics it presents a rare combination of formal and phenomenological topics based on the annual lectures given at the School of the Theoretical Advanced Study Institute 2001 OCo a traditional event that brings together graduate students in high energy physics for an intensive course of advanced learning The lecturers in the School are leaders in their fields The first lecture by E DOCOHoker and D Freedman is a systematic introduction to the gaugeOCogravity correspondence focusing in particular on correlation functions in the conformal case The second by L Dolan provides an introduction to perturbative string theory including recent advances on backgrounds involving Ramond Ramond fluxes The third by S Gubser explains some of the basic facts about special holonomy and its uses in string theory and M theory The fourth by J Hewett surveys the TeV phenomenology of theories with large extra dimensions The fifth by G Kane presents the case for supersymmetry at the weak scale and some of its likely experimental consequences The sixth by A Liddle surveys recent developments in cosmology particularly with regard to recent measurements of the CMB and constraints on inflation The seventh by B Ovrut presents the basic features of heterotic M theory including constructions that contain the Standard Model The eighth by K Rajagopal explains the recent advances in understanding QCD at low temperatures and high densities in terms of color superconductivity The ninth by M Sher summarizes grand unified theories

and baryogenesis including discussions of supersymmetry breaking and the Standard Model Higgs mechanism The tenth by M Spiropulu describes collider physics from a survey of current and future machines to examples of data analyses relevant to theories beyond the Standard Model The eleventh by M Strassler is an introduction to supersymmetric gauge theory focusing on Wilsonian renormalization and analogies between three and four dimensional theories The twelfth by W Taylor and B Zwiebach introduces string field theory and discusses recent advances in understanding open string tachyon condensation The thirteenth by D Waldram discusses explicit model building in heterotic M theory emphasizing the role of the E8 gauge fields The written presentation of these lectures is detailed yet straightforward and they will be of use to both students and experienced researchers in high energy theoretical physics for years to come The proceedings have been selected for coverage in OCo Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings OCo CC Proceedings OCo Engineering Physical Sciences Fields, Strings, and Duality Theoretical Advanced Study Institute in Elementary Particle Physics 1996, Boulder, Colo, Brian Greene, 1997 The past year has witnessed truly remarkable developments in our understanding of string theory Fields Strings and Duality TASI 96 is an invaluable collection of review papers on the subject contributed by the most prominent researchers in the field This volume is a scientific treasure for graduate students researchers and all others who are interested in the progress of theoretical physics Publisher's website

W. Giulini, Claus Kiefer, Claus Lämmerzahl, 2003-09-16 The relation between quantum theory and the theory of gravitation remains one of the most outstanding unresolved issues of modern physics According to general expectation general relativity as well as quantum field theory in a fixed background spacetime cannot be fundamentally correct Hence there should exist a broader theory comprising both in appropriate limits i e quantum gravity This book gives readers a comprehensive introduction accessible to interested non experts to the main issues surrounding the search for quantum gravity These issues relate to fundamental questions concerning the various formalisms of quantization specific questions concerning concrete processes like gravitational collapse or black hole evaporation and the all important question concerning the possibility of experimental tests of quantum gravity effects **Dualities of Strings and Branes** Bert Janssen, 1998
