Structural Immunology of Molecular Innate Immunity Hyun Ho Park, Qian Yin, Jun Hyuck Lee, 2023-10-31 Innate immunity has a critical role in the early stage of the host defense response by the timely recognition of pathogenic or danger signals by various cell surface or cytoplasmic receptors This is followed by signal transduction via various adaptor and effector molecules The main functions of innate immunity are to identify and remove the invading pathogens to recruit various immune cells to the site of infection and to prepare the

adaptive immune response The Innate immune system has been intensively studied for several decades and now we can begin to understand this system on a molecular level

Biophysical Tools for Biologists John J. Correia, H. William Detrich III, 2011-09-21 Driven in part by the development of genomics proteomics and bioinformatics as new disciplines there has been a tremendous resurgence of interest in physical methods to investigate macromolecular structure and function in the context of living cells This volume in *Methods in Cell Biology* is devoted to biophysical techniques in vitro and their applications to cellular biology *Biophysical Tools for Biologists* covers methods oriented chapters on fundamental as well as cutting edge techniques in molecular and cellular biophysics This book is directed toward the broad audience of cell biologists biophysicists pharmacologists and molecular biologists who employ classical and modern biophysical technologies or wish to expand their expertise to include such approaches It will also interest the biomedical and biotechnology communities for biophysical characterization of drug formulations prior to FDA approval Describes techniques in the context of important biological problems Delineates critical steps and potential pitfalls for each method Includes full color plates to illustrate techniques

Advanced Technologies for Protein Complex Production and Characterization M. Cristina Vega, Francisco J. Fernández, 2024-03-20 This edited volume discusses the identification discovery characterization structure determination and modeling of multicomponent macromolecular complexes and as such it fully complements the first volume ISBN 978 3 319 27214 6 which targeted methods of recombinant production of protein complexes This book is divided in 8 sections offering a selection of technologies widely used in the characterization of protein and protein nucleic acid complexes for different purposes and at different scales From native electrophoresis methods that are accessible to any reasonably well equipped laboratory to the sophisticated setup required for structure determination by cryo electron microscopy or X ray crystallography this book contains a wide variety of clearly explained analytic and preparative approaches connected with the production techniques developed on the previous volume The readers will find an integral connection between this book and the first volume which ensures a comprehensive and updated discussion of the main topics of the discipline Taken together these volumes constitute a cohesive and authoritative source of the research on multicomponent macromolecular complexes In here we focus on

characterization of protein complexes in the broadest sense which is not typically covered in other sources Moreover all chapters are carefully written by world renowned scientists and active researchers making this volume ideal not only as a reference source but also as a companion book for the daily laboratory work This book is aimed for a wide range of scientists from science students to experienced researchers working on protein and protein nucleic acid complexes who need a thorough understanding of protein production and complex characterization
