Structural Traps Vi:

Structural Traps VI. , Petroleum Geoscience Jon G. Gluyas, Richard E. Swarbrick, 2013-04-25 *Petroleum Geoscience* is a comprehensive introduction to the application of geology and geophysics to the search for and production of oil and gas. Uniquely this book is structured to reflect the sequential and cyclical processes of exploration appraisal, development and production. Chapters dedicated to each of these aspects are further illustrated by case histories drawn from the authors' experiences. *Petroleum Geoscience* has a global and geotemporal backdrop, drawing examples and case histories from around the world and from petroleum systems ranging in age from late Pre-Cambrian to Pliocene. In order to show how geoscience is integrated at all levels within the industry, the authors stress throughout the links between geology and geophysics on the one hand and drilling, reservoir engineering, petrophysics, petroleum engineering, facilities design and health, safety and the environment on the other. *Petroleum Geoscience* is designed as a practical guide with the basic theory augmented by case studies from a wide spread of geographical locations. Covers all the key aspects of the origin of petroleum exploration and production. It takes account of the modern emphasis on the efficient utilisation of reserves on new methods in exploration such as 3D seismics. Book takes value chain approach to *Petroleum Geoscience*. First new text on petroleum geology for geology undergraduates to be published in the last ten years. Packed full of real life case studies from Petroleum industry. Hydrocarbon Seal Quantification A.G. Koestler, R. Hunsdale, 2002-04-29 This volume contains 17 selected papers reflecting the flavour of the Norwegian Petroleum Society conference on hydrocarbon seals quantification and showing the recent significant advances in the understanding and application of hydrocarbon seal methodologies. Three broad categories are covered in this book: methodologies addressing cap rock integrity, methodologies relating to fault seal and case studies both from the hydrocarbon basins of Northwestern Europe and in the form of outcrop examples. With the North Sea, Norwegian Sea and Atlantic Margin moving along their respective basin maturity and development curves, exploration is being forced deeper into high pressure, high temperature terrains while exploitation and development requires greater precision and realism in reservoir simulations to maximise drilling strategies to prolong field life. In all instances the need for predictive tools and methodologies that address the integrity and behaviour of top and lateral fault seals to hydrocarbon traps both in the static and dynamic state have been identified as key risk factors and this is reflected in this volume.

Energy Potential of the Russian Arctic Seas Alexey Piskarev, Mikhail Shkatov, 2012-06-14 The structure of sedimentary basins of the Russian Arctic Seas is studied and illustrated by a number of maps, cross sections and geophysical models. The calculated density models of the Earth's crust illustrate the deep structure of the main blocks of the crust. Five major gas condensate and gas fields are discovered here: three in Shtokman, Ludlov, Ledovoe in the Barents and two in Leningrad and Rusanov in the Kara Sea. Geological and geophysical characteristics of the Russian Arctic Sea sedimentary basins allow an estimation of their hydrocarbon potential by comparison with the known world analogues. Total potential resources of giant

deposits of hydrocarbons in Russian Arctic Seas are estimated at 470 billion barrels of oil equivalent The richest resources are the Kara Sea and Laptev Sea Less rich is Barents Sea The relatively smaller contribution to the overall estimation of the resources makes the resources of East Siberian Sea and Chukchi Sea Development the energy capacity of the continental shelf of Russia can play a stabilizing role in the dynamics of oil and gas production in the period 2010-2020 A key role in developing the capacity of the Arctic shelf oil and gas play is the innovative technology in exploration production and management of the relevant investment projects World offshore experience indicates that the combination of these factors is achieved through the formation of international firms and organizations Comprehensively assesses the potential oil and gas resources in sedimentary basins within the Russian sector of the Arctic Ocean Describes the economic and legal challenges to the development of offshore fields in Russia Explores possible ways and timing to make these hydrocarbon resources available to the global market

Geology of North Africa Edward Tawadros, 2011-11-02 An expanded and updated edition of the original Geology of Egypt and Libya New chapters covering the geology of Algeria Tunisia and Morocco have been added to cover all of North Africa Petroleum systems are now also discussed and the history of geological exploration in Egypt and Libya Reviews tectonic elements geology of the Pan African Shield and Phanerozoic geological evolution of the five North African countries describes most of the lithostratigraphic units contains over 2500 references

Mesozoic Resource Potential in the Southern Permian Basin B. Kilhams, P.A. Kukla, S. Mazur, T. McKie, H.F. Mijnlief, K. van Ojik, 2018-08-31 The Southern Permian Basin as its name suggests is a historical heartland for hydrocarbon production from the Palaeozoic Rotliegend interval However in this mature basin the Mesozoic presents further possibilities to offer resource security to NW Europe Such opportunities include increasing efficiency in the production of discovered hydrocarbons exploration for further hydrocarbons both conventional and unconventional and efficient exploration for and production of geothermal energy All these potential resources require a grounding in technically sound geoscience via traditional scientific observation and the application of new technologies to unlock their value The main aim of this volume is to bring together the work of academics and industry workers to consider cross border geoscience including contributions on Poland Germany The Netherlands the United Kingdom and adjacent areas The work presented intends to contribute to the development and discovery of further Mesozoic energy resources across the basin
